

A daily ritual begins early in Gangjeong Village on Jeju Island, South Korea, site of a joint U.S.-South Korean deepwater naval base. At 7 am every morning, activists at the entrance to the military base, begin a 100 bows, prayer. Police are lined up around them to make sure

they don't block construction vehicles. On this particular morning, this spiritual presence is augmented by Catholic peace workers, some of whom spent the previous night here in the raw damp. A mattress lies by the side of the road, occupied by Father Mun, one of the most famous

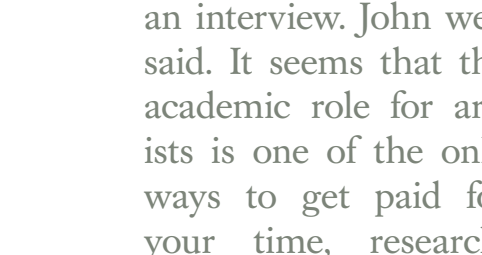

radical priests in Korea. When he gets up, he is surrounded by an entourage of police who move with him as he walks, blocking his way if he tries to go too close to the road into the base. At one point, he shakes his cane at them, shouting in Korean that he is not a contagious disease to be quarantined this way. Falling oxygen levels caused by global warming could be a greater threat to the survival of life on planet Earth than flooding, according to researchers from the University of

Leicester published in Bulletin of Mathematical Biology. A study led by Sergei Petrovskii, Professor in Applied Mathematics from the University of Leicester's Department of Mathematics, has shown that an increase in the water temperature of the world's oceans of around six degrees Celsius, which some scientists predict could occur as soon as 2100, could stop oxygen production by phytoplankton by disrupting the process of photosynthesis. In all, 13 people have been killed so far this year by law enforcement officers in Kern County, which has a population of just under 875,000. During the same period, nine people were killed by the NYPD across the five counties of New York City, where almost 10 times as many people live and about 23 times as many sworn law enforcement officers patrol. The deaths span from January to the early hours of last Sunday morning, when a man accused of firing at officers during a foot chase in downtown Bakersfield was shot and killed. One senior Bakersfield police officer has been involved in at least four deadly shootings in less than two years. Another officer separately shot dead three people within two months in 2010. Other law enforcement officers in Kern County have meanwhile been involved in deadly beatings of unarmed men, sex crimes against women and reckless car crashes resulting in criminal convictions. They have some fine officers here, but unfortunately they have some bullies and thugs who often run the show," Henry Mosier, who worked for the county as a public defender for a decade before his recent retirement, said in an interview. John well said. It seems that the academic role for artists is one of the only ways to get paid for your time, research, and work as an artist.

And of course there is a heavy price to be paid as an academic depending on the specific environment and how it lends itself to forms and processes that may, like the gallery or museum, not fit within acceptable, relevant modes of art practice. It is so ironic that the very originality and degree of experimentation that is required to break new ground as an artist, can also be one's demise in the establishment worlds of art and academia. Ancient Native arts

and technology are bringing a cultural revolution to 13 tribal colleges and universities that have received a substantial grant from the American Indian College Fund. The three-year "Restoration and Preservation of Traditional Native Art Forms and Knowledge Grant of \$860,000, allows tribal colleges to develop curricula on lost or rare art forms that have fallen out of usage.

Students are creating everything from snowshoes to canoes and learning about the culture behind their handiwork. Sexological bodyworkers give whole body massages to help you get... wherever you need to get. I mean that in the prurient way. If you want to have an orgasm, you are certainly welcome to and will be aided in that way, but the sessions are more about exploring issues in your life, your sexuality or general spirit. It's kind of a mashup between a therapy session, a spiritual quest and an extremely thorough spa visit.

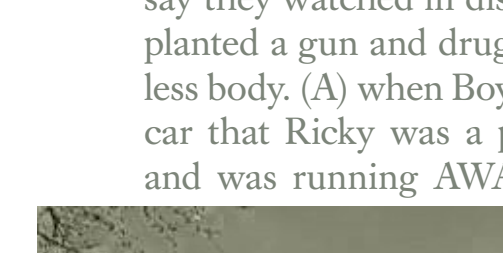

Cops Turn Off Body Cams Before Killing Man, Witnesses Watch Them Plant Gun and Drugs Witnesses say they watched in disbelief as cops killed a man, then planted a gun and drugs 'within arms reach' of his lifeless body. (A) when Boykin and his gang pulled over the car that Ricky was a passenger in, Ricky jumped out and was running AWAY before Boykin and his gang

could even get out of their unmarked car. (B) Boykin jumped out of his car and fired at least two shots at Ricky WITHOUT ANY interaction between him and Ricky whatsoever. By the time Boykin began shooting, Ricky was yards away from him. Ricky was too far away for Boykin to try to tase or arrest Ricky. (C) While chasing Ricky, Boykin fell into a ditch that Ricky jumped over, Boykin came up in the ditch shooting several more shots at Ricky. Ricky is running away from Boykin this whole time and at some point Ricky is hit from behind by some of Boykin's bullets. (D) As Ricky is running

through his neighborhood screaming "y'all help me, they gonna kill me", neighbors began coming outside their homes to see what all the shooting and yelling was about. One of Boykin's bullets went into one of these neighbors' door. Ricky eventually hid underneath the home of one neighbor, but Boykin and his gang found Ricky and pulled him from underneath the house and placed Ricky between that home and another one. (E) Although officers on the scene were intimidating the people watching this incident by pointing guns in these people's faces telling them to get in the house and to get out of their own windows, some people still managed to see officers tase Ricky while he was laying there bleeding to death.

Neighbors also managed to see an officers plant a gun near where they had laid Ricky after pulling him from underneath a home. (F) The paramedics involved took entirely too long to move from their staging area up the street from where Ricky was laying to the actual place where Ricky was laying. The paramedics did not leave the scene to take Ricky to the hospital with any sirens on or with any interior lights on or any police escorts. The paramedics left the shooting scene in no hurry at all as if they were carrying a dead body, even though Ricky was alive when they put him inside the ambulance." The artists receive up to 6 weeks accommodations at the Caetani Centre, and have access to a modest studio space provided by the Allan Brooks Nature Centre, receiving support from staff from both centers, and receive a \$500 honorarium to assist with costs. Many artists have chosen to work out in the community and the surrounding lakes and mountains, and projects that involve community par-

ticipation are also encouraged. The artists are invited to give presentations and workshops, and are encouraged to leave a piece of art in the community. The objective of our program is to support and attract artists and writers to the community through providing residential and studio/workspaces that allow experimentation, develop new ideas and interact with fellow artists and the community through presentations, workshops or exhibitions. The programs are intended to promote the opportunity development while giving the community access to a diverse range of arts practices, theories and experiences. Open to emerging and established visual artists in any medium, writers, musicians, curators, cultural researchers, musicians and performing. Self-directed residencies are of varying

lengths of time, from 2 weeks to 6 months, to suit the individual needs of the applicant. Please specify the preferred time period for the residency and length of stay for project in your application form. The man accused of being "a senior advisor" and mentor of Ross Ulbricht, the convicted operator of the illegal drug marketplace Silk Road, has been arrested in Thailand and charged with conspiring to traffic drugs and money laundering. The US Department of Justice (DoJ) announced on Friday that Roger Thomas Clark, 54, is accused of being "Variety Jones," who was a close confidante of Ulbricht's ... Ride-hailing app and world's most valuable startup Uber is seeking another \$2.1 billion in funding, which could value the company as high as \$64.6 billion. But the controversial service is now facing more intense competition: Uber's four biggest rivals-U.S.-based Lyft, China's Didi Kuaidi, India's Ola, and Singapore-based GrabTaxi-announced this week they are banding together to take on Uber, including sharing tech, strategy, and customers. Each video is based upon a question that forms the premise or starting point. The goal is not to define answers but to challenge myself to combine footage in a spontaneous way that is optically, conceptually and psychologically engaging. Each premise is explained at the end of the video and every week a new video is inserted at the top of the grid. Like a sketch, these videos are an immediate response, but instead of being based on observation, they begin with a question. Only existing video footage is used, including clips that I have previously filmed, found or have been donated. You are welcome to become a participant and email me with footage under one minute, or a perge idea. ISergeTcherzeoff confirm that the following lines are not a spam message but the instructions of an antispam system that I have put in place; as it is the first time that you write me on this mailbox, please click on the link below to become authorized; all your subsequent mails will be accepted; thanks in advance to follow the instructions. Je confirme que les lignes qui suivent ne sont pas un spam mais un systeme antispam auquel j'ai souscrit. Comme c'est la premiere fois que vous m'ecrivez a cette adresse, cliquez

sur le lien ci-dessous. Ensuite, tous vos mels seront autorises sans procedure particuliere. Merci de suivre les instructions. Ya that's a good question that, frankly, I have no good answer for. At the moment my focus is on human performance, partially for my own aesthetic reasons but also for exactly the reason you point out. If the network is a sort of time domain that is constantly in flux our human ability to listen and adapt fluidly works well. The rigidity of rhythms on a sequencer coupled with the difficulty of programming a computer to "listen" and adjust accordingly makes this pretty tricky. Although with that said, I am sure there are folks much more clever than I who could find an elegant solution. Species Summary: Pink-footed Goose (10 Connecticut) Barnacle Goose (1 New York) Tufted Duck (1 California) Flesh-footed Shearwater (1 California, 3 Oregon) Brown Booby (4 California, 13 Florida) Slaty-backed Gull (1 Wisconsin) Aplomado Falcon (2 Texas) Western Spindalis (9 Florida) Irish's collaged paintings assert the need for transformation. Mountain peaks meet explosive patterns of colour that reflect our hunger for speed and fossil-fueled dynamism. Known for his architecturally scaled, painterly assemblages, this exhibition foregrounds Irish new aluminum constructions. A rich sense of painterly process meets the ferocity of slicing, extracting, and assembling. Out of the shards, new possibilities arise. Back in October, I helped break the news that you could watch the entire first season of Bob Ross's beloved TV show, The Joy of Painting, free online. Now can you add another 70 complete episodes to your media queue (roughly 20% of the show's entire catalogue), all pulled from different seasons that aired between 1983 and 1994. Just call up this playlist from Bob's official YouTube channel, or startstreaming the videos above. If you sit tight for 35 hours, you'll learn how to paint Misty Rolling Hills, Lazy Rivers, Twilight Meadows, Mountain Streams, Peaceful Valley sand other idyllic scenes. 20 years after Bob's untimely death, there's now a strange revival of Bob Ross in full swing. And thanks to his YouTube channel, you can get sweptup in the mania anytime you like. I can't

get enough of the Chelsea Hotel in a New York, at the height of a certain cultural moment in certain history. Though it struggled as a business for years after it first opened as an apartment building in 1884 and changed hands left and right until the 1970s, it hit its stride as an icon when a certain critical mass of well-known (or soon to be well known) musicians, writers, artists, filmmakers, and otherwise colorful personalities had put in time there. One such musician, writer, artist in other media, and colorful personality indeed has an especially strong association with the Chelsea: Patti Smith. 42f, bleak. Cheese toast, cachews, bananas. Coffee. The Director of Programming will work alongside the Executive Director and will report directly to the Board of Directors. The Director of Programming is responsible for the direction, and administration of year-round programming, mentorship facilitation, event coordination, and other special projects. The ideal candidate will be a motivated emerging arts professional who is committed to providing a platform for emerging artists, is passionate about arts and has a strong understanding of contemporary art and the particular concerns of emerging artists. This is an entry-level position, and as such there is opportunity for training and job shadowing on aspects of the position in which candidates may not have extensive experience. The PEERS program leverages collectively-accumulated knowledge and ideas to support participants in developing the skills and relationships needed to build artistic infrastructure that has a lasting impact on the communities in which we coexist. Rather than a hierarchy of mentor to mentee, this program will be an opportunity for participants to learn from the diverse experiences of their peers. Equal parts shared learning, and "do-your-own-thing" participants will be able to focus on the development of practice, discourse, and ideas, without pressure to produce anything. I just wanted to let you all know that if you see a Muslim woman in hijab/headscarf out in public today and in the near future, she is likely wearing it with a strong sense of bravery and vulnerability. I suspect that any solidarity and support you can show her would be infinitely appreciated. Visibly Muslim women have always been targets of various forms of Islamophobia (harrassment, violence, even murder), but in the wake of the Paris attacks and last night's San Bernardino shooting, many of my Muslim female friends are currently debating whether or not they should dress in any identifiably Muslim way right now. Islamic law clearly allows all sorts of accommodations to protect life and safety, so many are choosing not to go out today and/or not send their kids to Islamic schools and/or change their dress, while others are braving the unknown without any changes other than in their emboldened hearts. I respect them all, but thought I could go one step further - and let all my work colleagues in on the complicated and vulnerable situation in which American Muslims - especially women - feel right now. These actors are increasingly the focus of state and private powers and the target of vilification campaigns, repression or criminalisation. As a political foundation with its roots firmly planted in the civil societies of our partner countries, we have experienced first-hand how their space is being restricted (shrinking spaces)

This is an entry-level position, and as such there is opportunity for training and job shadowing on aspects of the position in which candidates may not have extensive experience. The PEERS program leverages collectively-accumulated knowledge and ideas to support participants in developing the skills and relationships needed to build artistic infrastructure that has a lasting impact on the communities in which we coexist. Rather than a hierarchy of mentor to mentee, this program will be an opportunity for participants to learn from the diverse experiences of their peers. Equal parts shared learning, and "do-your-own-thing" participants will be able to focus on the development of practice, discourse, and ideas, without pressure to produce anything. I just wanted to let you all know that if you see a Muslim woman in hijab/headscarf out in public today and in the near future, she is likely wearing it with a strong sense of bravery and vulnerability. I suspect that any solidarity and support you can show her would be infinitely appreciated. Visibly Muslim women have always been targets of various forms of Islamophobia (harrassment, violence, even murder), but in the wake of the Paris attacks and last night's San Bernardino shooting, many of my Muslim female friends are currently debating whether or not they should dress in any identifiably Muslim way right now. Islamic law clearly allows all sorts of accommodations to protect life and safety, so many are choosing not to go out today and/or not send their kids to Islamic schools and/or change their dress, while others are braving the unknown without any changes other than in their emboldened hearts. I respect them all, but thought I could go one step further - and let all my work colleagues in on the complicated and vulnerable situation in which American Muslims - especially women - feel right now. These actors are increasingly the focus of state and private powers and the target of vilification campaigns, repression or criminalisation. As a political foundation with its roots firmly planted in the civil societies of our partner countries, we have experienced first-hand how their space is being restricted (shrinking spaces)

get enough of the Chelsea Hotel in a New York, at the height of a certain cultural moment in certain history. Though it struggled as a business for years after it first opened as an apartment building in 1884 and changed hands left and right until the 1970s, it hit its stride as an icon when a certain critical mass of well-known (or soon to be well known) musicians, writers, artists, filmmakers, and otherwise colorful personalities had put in time there. One such musician, writer, artist in other media, and colorful personality indeed has an especially strong association with the Chelsea: Patti Smith. 42f, bleak. Cheese toast, cachews, bananas. Coffee. The Director of Programming will work alongside the Executive Director and will report directly to the Board of Directors. The Director of Programming is responsible for the direction, and administration of year-round programming, mentorship facilitation, event coordination, and other special projects. The ideal candidate will be a motivated emerging arts professional who is committed to providing a platform for emerging artists, is passionate about arts and has a strong understanding of contemporary art and the particular concerns of emerging artists. This is an entry-level position, and as such there is opportunity for training and job shadowing on aspects of the position in which candidates may not have extensive experience. or how it is becoming virtually impossible for them to carry out their political activities (closing spaces). An independent and critical civil society is not just a thorn in the side of a multitude of governments in Africa, Asia, Latin America and the Middle East; these same governments are fighting civil society to an extent unheard of in the past 25 years. Autocratic countries strive to nip any form of association and public protest in the bud. NGO laws are not the only legislative measures that restrict civil society's space: home security laws, anti-terrorism laws, media laws ? all of these entail restrictions on the capacity to act for civil society actors, social movements, journalists, bloggers and critical professional associations. In democratic or partially democratic countries, we can increasingly observe that the entire bundle of legal, administrative and repressive measures undertaken by governments primarily targets social movements and NGOs that stand up to large-scale projects (such as developing coal, oil or gas reserves), and also to land grabbing or other infrastructure projects.

China, Russia, India, Turkey or Cambodia are not alone in exerting pressure on environmentalists as members of civil society. In many countries, it is a matter of both, of repelling any entitlement to democratic participation and protests against the ?development model? so as not to endanger the political and economic power of the elites. Governmental fear of citizens' participation and protest is immense. The loss of political power is the major threat. All too often, defending this power goes hand in hand with the safeguarding of economic interests. Here, protests against land grabbing and large-scale projects are ?unwelcome?. Governments justify their resistance to external democracy promotion above all by the country's sovereignty ? a key category in international law ? that has attained a high emotional importance in many countries as a result of the decolonisation struggles. From this perspective, democracy assistance is viewed as an illicit intervention into the internal affairs of another state. The nightmare scenarios associated with the colour revolutions coined after symbolic colours or fragrant plants which led to regime change in the early 2000s are a major contributory factor here.

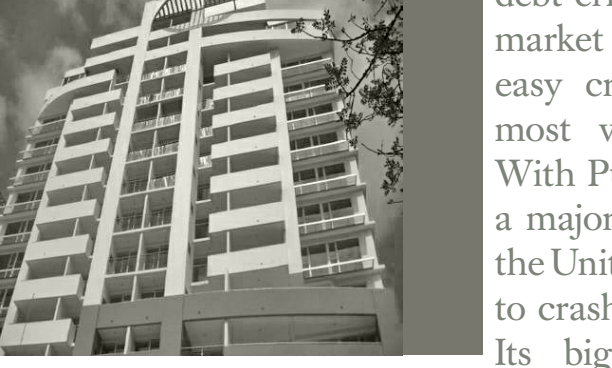

No idea is born fully formed. It emerges a little bit as a child is born, kind of messy and confused, but full of possibilities. And it's only through generous contribution, faith and challenge that they achieve their potential. The debt avalanches. Once it accumulates enough mass, and momentum is not sufficient to stop its collapse, it overwhelms its host, and will come crashing down on the rest of the system, too. Across the planet, there are hundreds of governments - local, state and national - as well as business and households who are reaching a breaking point. Already drowning in debt, many are about to default on loan repayments, and thus set off a series of debt crises that will be met with market chaos and a tightening of easy credit for those who are most vulnerable to implosion. With Puerto Rico also timed for a major default that will burden the United States, Mexico is ready to crash, and bracing for impact. Its biggest construction firm, which has been dependent upon government contracts that are now drying up, is facing default on a \$31 million interest bill. Energy and commodity prices are bottoming out, and people are stressing over the short-falls in revenue. Weak economic systems and promises under socialism and welfare systems are making the balance sheets impossible to rectify. As lenders are demanding repayment, third world nations are under extra pressure due to a "strong" dollar that costs more to repay. It is from numberless diverse acts of courage and belief that human history is shaped. Each time a man stands up for an ideal, or acts to improve the lot of others, or strikes out against injustice, he sends forth a tiny ripple of hope, and crossing each other from a million different centers of energy and daring, those ripples build a current that can sweep down the mightiest walls of oppression and resistance. Individualism, as a definition of holding to personal ideals, is classed as obstinacy and anti-social. Inevitably we run point blank into the evils of compromise. When compromise enters our moral fibre, it spreads like a cancerous growth. We think we plan adequate safeguards around areas in which we contemplate yielding our standards, but once we lower the fence

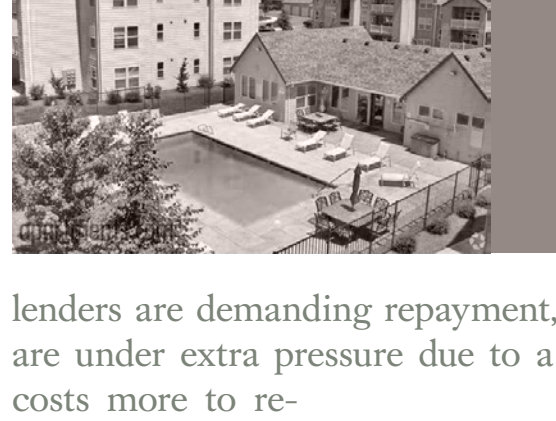

ing over the short-falls in revenue. Weak economic systems and promises under socialism and welfare systems are making the balance sheets impossible to rectify. As lenders are demanding repayment, third world nations are under extra pressure due to a "strong" dollar that costs more to repay. It is from numberless diverse acts of courage and belief that human history is shaped. Each time a man stands up for an ideal, or acts to improve the lot of others, or strikes out against injustice, he sends forth a tiny ripple of hope, and crossing each other from a million different centers of energy and daring, those ripples build a current that can sweep down the mightiest walls of oppression and resistance. Individualism, as a definition of holding to personal ideals, is classed as obstinacy and anti-social. Inevitably we run point blank into the evils of compromise. When compromise enters our moral fibre, it spreads like a cancerous growth. We think we plan adequate safeguards around areas in which we contemplate yielding our standards, but once we lower the fence

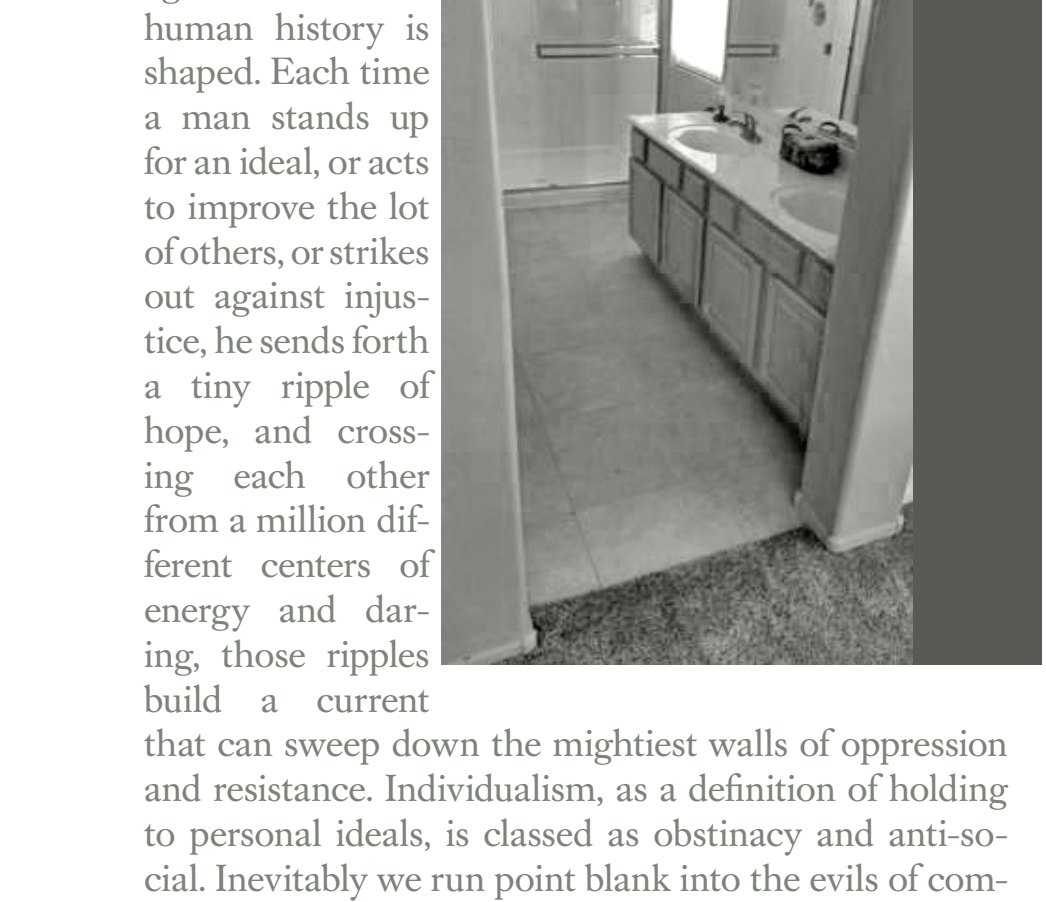

and break our strong will to do right, come what may, we expose ourselves to forces that spread beyond control. Compromise always starts on some rather insignificant principle. The dangers of yielding seem negligible and we usually risk those things first where observation and detection by others is difficult. We thus seek to avoid censure and discipline. In a short time we find ourselves trading our principles for false values and doing it in the black market of human relationships. If it were proved to me that in making war, my ideal had a chance of being realized, I would still say "No" to war.

For one does not create human society on mounds of corpses. I must stand with anybody that stands right, stand with him while he is right, and part with him when he goes wrong. 37 percent of Americans support sanctions against Israel as a response to settlement-building. Of those, 27 percent support economic sanctions and 10 percent are in favor of even harsher measures. Among Democratic voters the proportion is even higher, with half supporting sanctions. The earliest-known Japanese record of Kwajalein and the Marshall Islands appears in the writings of Suzuki Keikun, who was dispatched to the Marshall Islands in 1885 to investigate a Japanese shipwreck. Following the Spanish-American War in 1898, Imperial Germany purchased the Marshall Islands from Spain, and they experienced 16 years of peaceful German administration. At the outbreak of World War I in Europe, however, Japan joined the Triple Entente and seized the Marshall Islands only tooken resistance. In 1922 the island were placed under Japanese administration by a League of Nations Mandate. The islands of the Kwajalein atoll, especially the main island, served as a rural copra-trading outpost administered by Japanese civilians until the beginning of World War II in the Pacific in December 1941. It was then occupied by the Japanese military. With the end of the Cold War and a decreased threat of nuclear attack, many defense programs were canceled in the early 1990s. However, overcrowding on Ebeye remains a major problem. Continuing military operations and launch or re-entry tests perpetuate the dislocation of Marshall Islanders from their small islands throughout Kwajalein Atoll. The United States Army Kwajalein Atoll test site does not provide logistical support to Eb-

some of the smaller river systems of the region. A series of storm systems capable of producing heavy rainfall will move across the Pacific northwest through midweek. Rainfall amounts of 3 to 7 inches are possible in the coast range and cascades...From late Sunday through Monday. Another storm system capable of producing an additional 2 to 6 inches of rain across the coast range and cascades in a 6 to 12 hour period on Tuesday night and early Wednesday day may exacerbate flooding along additional river systems. At this point...Confidence in details...Such as which river basins will or will not experience the heaviest rain and flood...Is low. Nonetheless...Those living along river systems that tend to be prone to flooding. Should continue to monitor the weather and river forecasts over the next several days. Sinaloa officials said police apprehended three men who have confessed to murdering two people traveling in a van on the Mexico - Nogales highway last month, believed to be two Australians missing since November 20. The suspects were members of a gang of highway robbers who passed themselves off as police officers. The Volcano of Fire sent a plume of smoke and ash 1.4 kilometers high early this morning, prompting a warning by Civil Protection officials to watch for falling ash. Cuajimalpa borough officials in Mexico City have determined that 40,000 people in 68 illegal settlements are living in landslide-prone areas, and the homes of 800 of those are located within four extremely high-risk, zones. Human rights groups have announced the release of four people who had been arrested and held arbitrarily and allegedly tortured. Nanten Inari Shrine is located in a pretty, wooded, narrow valley in the grounds of Nanzoin Temple, between the main temple buildings and the giant Nehanzo. At first I was not sure if it was in fact an Inari Shrine, as there were no guardian fox statues. There were also no multiple torii. At the base there was a small pond with a Benzaiten statue, so I thought it could have been. The U.S. campaign to delegitimize Venezuela's December 6th parliamentary elections can only encourage violence by a right-wing opposition that has repeatedly refused to peacefully accept the results of Venezuela's democratic process. The U.S. government, which initially refused to recognize the results of Venezuela's 2013 Presidential elections, is seeking to discredit Sunday's vote if the conservative opposition fails to win a two-thirds parliamentary majority. From: Walter Time: 09:34 AM Steve, I agree with Shawn. I completed the Texas 200 this year and i slept on my P15 a total of 8 nights. I was extremely comfortable and had plenty of room. One berth was pretty much filled with gear and accessories while the other had the usual berth pad in addition to a camp pad, sleeping bag, light blanket and full sized pillow. Couldn't have been more comfy. I made a screen for the hatch to keep out the skeeter's and had a small battery operated fan. I've spent hundreds of nights in a tent and was glad I chose to stay on board instead. Contributions include five chapters by Oceanists: Obligations and Requirements: The Contexts of Knowledge and 'Together We Are Two: The Disjunctive Synthesis in Affirmative Mode' by Lisette Josephides; 'Apologetics of an Apology and an Apologia' by Andrew Moutu; 'Partible Personhood and Sacrifice in Melanesian Christianity: The New Melanesian Ethnography and the Paradox of Contemporary Religious Efflorescence' by Mark Mosko; 'Priceless Value: From No Money on Our Skins to a Moral Economy of Investment' by Karen Sykes. There are additional chapters by Henrietta Moore, Mitchell Sedgewick and Nigel Rapport. The volume concludes with an extended 'dialogue' between Josephides, Rapport and Strathern. About thirty years ago a Mountain Plover was found at Drift Creek Meadows near Lincoln City. It stayed in that location for about two weeks, but for some reason or another I never went up to see it. Two or three years ago one spent a while alone Llewellyn Road south of Corvallis. One of the days it was still present, Laura and I went there to buy grain at Venell's, which is about a half mile from where the bird was being seen. I think every other birder in western Oregon saw that plover, but that day, in spite of diligently searching for about half an hour, we failed to find it. So when Chuck Philo pointed out to me the Mountain Plover resting in the sand at South Beach State Park this morning, I finally got my vindication for missing it those other times. Now my list of nemesis species is down to two: Magnificent Frigate-

ny purchased the Marshall Islands from Spain, and they experienced 16 years of peaceful German administration. At the outbreak of World War I in Europe, however, Japan joined the Triple Entente and seized the Marshall Islands only tooken resistance. In 1922 the island were placed under Japanese administration by a League of Nations Mandate. The islands of the Kwajalein atoll, especially the main island, served as a rural copra-trading outpost administered by Japanese civilians until the beginning of World War II in the Pacific in December 1941. It was then occupied by the Japanese military. With the end of the Cold War and a decreased threat of nuclear attack, many defense programs were canceled in the early 1990s. However, overcrowding on Ebeye remains a major problem. Continuing military operations and launch or re-entry tests perpetuate the dislocation of Marshall Islanders from their small islands throughout Kwajalein Atoll. The United States Army Kwajalein Atoll test site does not provide logistical support to Eb-

weeks of 2015, that number has climbed to 15, with 10 of the cases involving video. "If you take the cases with the video away, you are left with what we would expect to see over the past 10 years - about five cases," said Philip Stinson, the Bowling Green State University criminologist who compiled the statistics from across the nation. A Peruvian city that was once high up in the Andes is now slowly sinking into the abyss. 400 years ago, Cerro de Pasco, the first town in Peru to be liberated from the Spanish, was one of the richest cities in the country because of its rapid mining growth. The legend tells that in the 1800s, the rocks around campfires in town wept silver. Unfortunately, a city that seemed to have it all has found an enemy in the entity that has been supporting it for all these years, the mine. Operated by Volcan Compania Minera, the open-pit mine is creating a deep hole in the middle of the city and destroying its neighborhoods and most importantly, its people. Before she moved to the U.S., Tashfeen Malik puzzled friends in Pakistan with her changes.

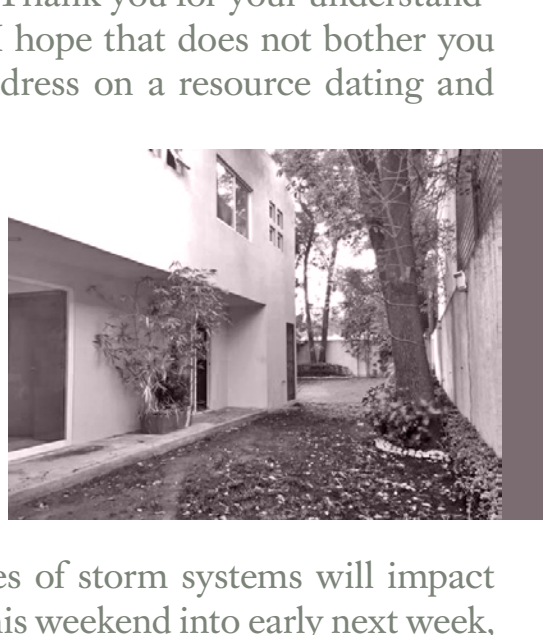

An official said one possibility is that she was already radicalized when she became a bride. Two hippopotamuses, direct descendants of the hippos smuggled into Colombia by famed drug kingpin Pablo Escobar, have made their way into a populated town in search of food.

Sheikh Akrama Sabri, the Imam of the Aqsa Mosque in Jerusalem, Islam's third holiest site, said Palestinians in the city are facing widespread and severe racial discrimination and harassment that reaches the extent of genocide in many cases. A project supporting Vietnamese children adopted by foreigners to visit their homeland and search for their origins has been approved by the Ministry of Justice. The General Authority of Civil Aviation of Saudi Arabia (GACA) has banned remotely piloted aircrafts from flying in the kingdom's airspace without permission. Alex Ssempijja, one of Uganda's most promising young ghetto musicians, has been tragically killed in a bicycle accident in the capital, Kampala. Various fake news sites reported that a lottery winner died after gold-plating his genitals. Social media rumors claimed ISIS operatives visited multiple car dealerships in Virginia, but the claims were not credible. Seller's message: "Hello, I am sorry that you didn't receive the item yet, but it is too

long, Maybe I can refund to you, and if you want again, please purchase them again, OK? Thank you for your understanding. Hi, I am Svetlana. I hope that does not bother you too. She found your address on a resource dating and decided to try to write. I am waiting for your photos and share their wish. This is my email address: zaitseva@eumail.com I'll be glad to get more of you and answer as well. Regards, Svetlana. Heavy rainfall forecast for Pacific Northwest. A series of storm systems will impact the Pacific Northwest this weekend into early next week, bringing a potential for heavy rainfall, very strong winds, and mountain snowfall. Species Summary: Pink-footed Goose (6 Connecticut) Barnacle Goose (1 New York) Tufted Duck (1 Massachusetts) Flesh-footed Shearwater (3 California, 3 Oregon) Brown Booby (17 California, 1 Texas) Northern Jacana (9 Texas) Curlew Sandpiper (1 New Jersey) Kelp Gull (3 Ohio) Aplomado Falcon (1 Texas) Sinaloa Wren (1 Arizona) Tropical Parula (1 Texas) Golden-crowned Warbler (6 Texas) Western Spindalis (8 Florida) This concern also applies to other lowly workers in data mining industries (which is really the only thing going on in data centers today.) Colocations (one 'I') are cold, noisy, often locked down to

the point where one needs an escort to go pee, there are surveillance cameras all around the place, you are lucky if you can find a broken chair, and there are no girls. There are many businessmen who own knowledge today. Consider Elsevier, the largest scholarly publisher, whose 37% profit margin^1 stands in sharp contrast to the rising fees, expanding student loan debt and poverty-level wages for adjunct faculty. Elsevier owns some of the largest databases of academic material, which are licensed at prices so scandalously high that even Harvard, the richest university of the global north, has complained that it cannot afford them any longer. Robert Darnton, the past director of Harvard Library, says "We faculty do the research, write the papers, referee papers by other researchers, serve on editorial boards, all of it for free ... and then we buy back the results of our labour at outrageous prices. For all the

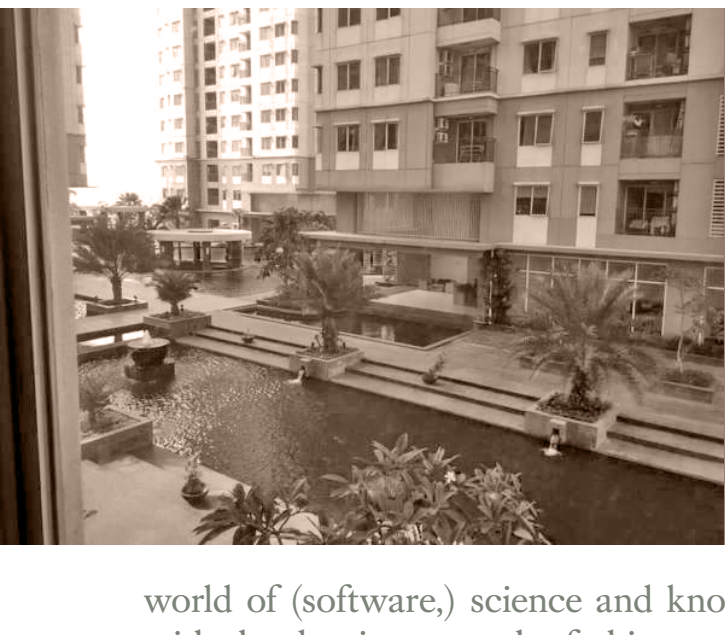

work supported by public money benefiting scholarly publishers, particularly the peer review that grounds their legitimacy, journal articles are priced such that they prohibit access to science to many academics - and all non-academics - across the world, and render it a token of privilege. Elsevier has recently filed a copyright infringement suit in New York against Science Hub and Library Genesis claiming millions of dollars in damages. This has come as a big blow, not just to the administrators of the websites but also to thousands of researchers around the world for whom these sites are the only vi-

able source of academic materials. The social media, mailing lists and IRC channels have been filled with their distress messages, desperately seeking arti-

cles and publications. Consumer boycott, as the form of resistance, is still beloved by the global northwest. A fantasy that if enough of us, individual consumers, gather together, coordinate and then redirect or allocate our consuming power resources some evil power will be shut down. Even most of us know that structural problems are hardest, if not impossible, to subvert this way.

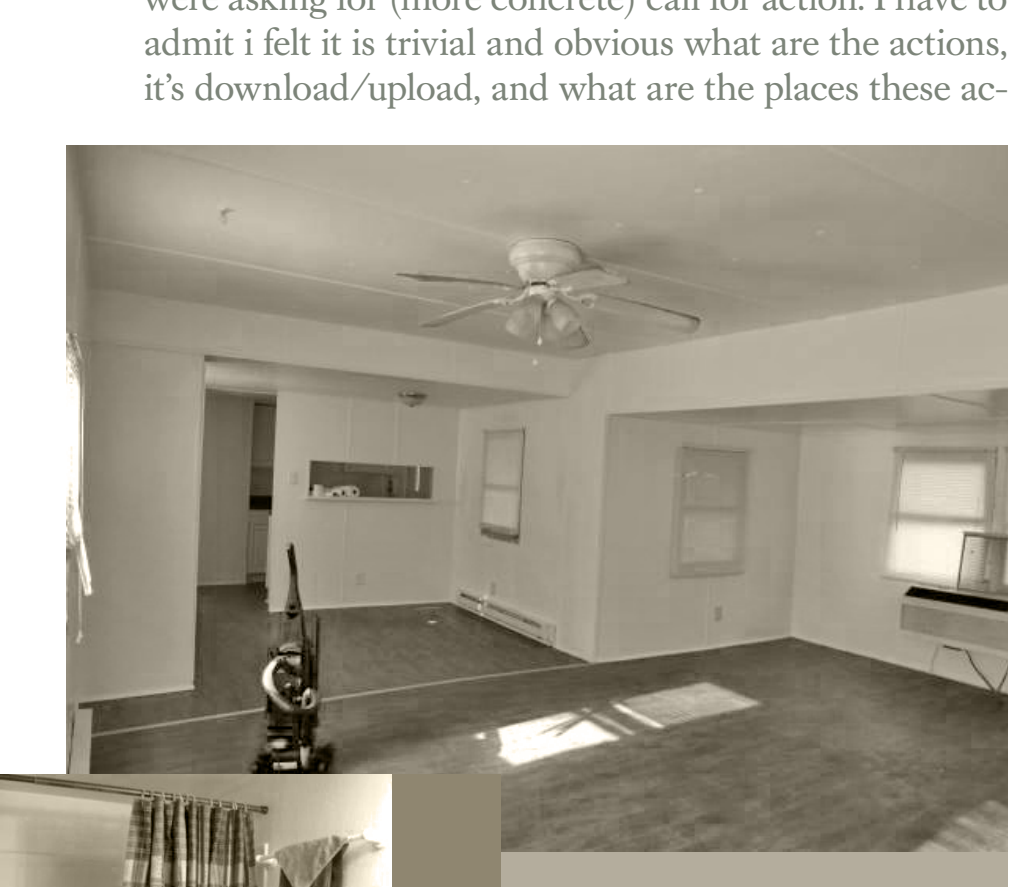

Together with that, in the particular case of scientific publishing, we face these days, there is a belief and confidence, resonating with arguably successful story of free software, that we can rebuild the

world of (software,) science and knowledge in parallel with the dominant one by forking our production from these axes of (dominant) evil. Capitalist periphery doesn't have that confidence nor beliefs (not for that kind of resistance nor for the production capacity). For that periphery, digital networks are one of few, if not the only, global infrastructure where if empowered by lib-

powered by libgen, sci-hub, ubu, aaaaarg or monoskop one could feel everything is (still sort of) all right. You read, write and execute. Download and upload. Intention of the letter was first to express the solidarity with libgen and sci-hub, most of the time separate in the internet island of russian language and (sub)culture(s). Another goal was to invite people (dear fellow custodians) to build the solidarity (safe) network for the future struggles. Which unavoidably is coming soon. The biggest surprise for me was that many people were asking for (more concrete) call for action. I have to admit i felt it is trivial and obvious what are the actions, it's download/upload, and what are the places these ac-

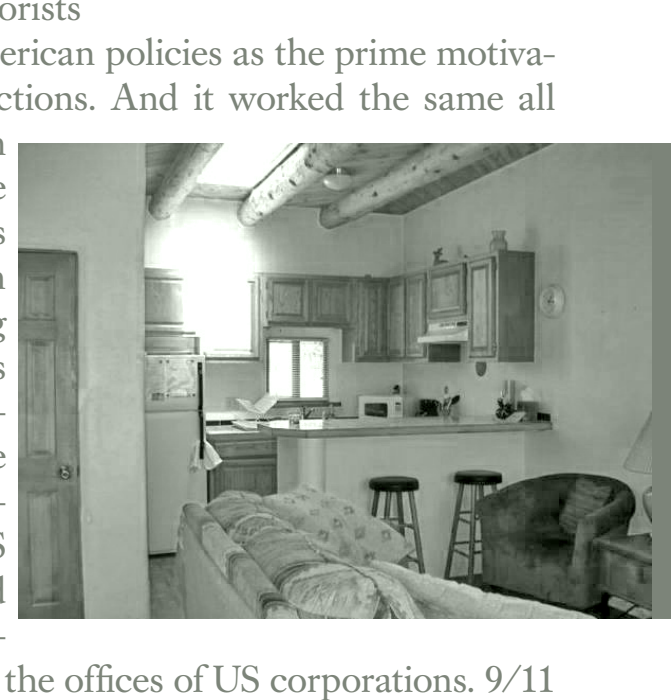

tions are happening. Will try to address that in the follow ups. I believe that open access is important and relevant but it also reminds me on the whole creative commons enthusiasm which badly failed in the past.

Tracy Shelvey, 41, fell from the roof of a shopping centre car park in Rochdale after learning the man accused of raping her had been acquitted. From the early days of America's War on Terror, and even before then, I advocated seeing terrorists as more than just mindless, evil madmen from another planet. I did not believe they were motivated by hatred or envy of American freedom or democracy, or of American wealth, secular government, or culture, although George W. Bush dearly wanted us to believe that. The terrorists were, I maintained, driven by decades

of terrible things done to their homelands by US foreign policy. There should be no doubt of this I wrote, for there are numerous examples of Middle East terrorists explicitly citing American policies as the prime motivation behind their actions. And it worked the same all over the world. In the period of the 1950s to the 1980s in Latin America, in response to a long string of outrageous Washington interventions, there were countless acts of terrorism against US diplomatic and military targets as well as the offices of US corporations. 9/11 was a globalized version of the Columbine High School disaster. When you bully people long enough they are going to strike back. In cellphone video taken by a bystander, Marcellus Johnson, the suspect is seen surrounded by police officers on the side of a rain-slicked road. He appears to be holding something shiny in his right hand and talking animatedly, although his words cannot be understood. He takes a step toward the officers and places his left hand on a parked police cruiser. Moments later, the sound of a Taser is heard, followed immediately by two gunshots. The suspect falls to the ground, clutching his chest. Spectacular violence has again made

its reaping a ppearance, a brutal but sure sign that the distinction between militia and civilian has ceased

having any value in the US context. The militarisation of the society has become the most vigorous of diseases, whose greatest symptom is not so much gun ownership as the culture behind access and use. Khalida Jarrar, Palestinian leftist and feminist parliamentarian and advocate for political prisoners, has been sentenced by an Israeli occupation military court in Ofer to 15 months imprisonment today, 6 December 2015. Arrested by occupation military forces who invaded her Ramallah home on 2 April, the imprisonment of Jarrar, former executive director and current vice-chair of the board of directors of Addameer Prisoner Support and Human Rights Association, has sparked widespread Palestinian, Arab and international outrage. Forty six years ago this week, 21 year old Black Panther leader Fred Hampton was murdered in his bed by Chicago police and the FBI. Hampton was a hero to many in his community for the work he did to feed hungry schoolchildren, create peace

in his high school and within his community as a leader of the Black Panthers. His crime was being intelligent, talented and effective. In his short life, he rattled the power structure. Corporate crime reporter Russell Mokhiber writes that large corporations are now being hit with penalties of more than a billion dollars for environment, health and safety violations, but violations and evasion of regulators continue as do lack of criminal prosecutions. Similarly, big banks are facing high fines but this has not changed their behavior. Unless you become more watchful in your States and check this spirit of monopoly and thirst for exclusive privileges, you will in the end find that the most important powers of Government have been given or bartered away, and the control of your dearest interests have been passed into the hands of these corporations. What is the great American sin? Extravagance? Vice? Graft? No; it is a kind of half-humorous, good-natured indifference, a lack of "concentrated indignation" as my English friend calls it, which allows extravagance and vice to flourish. Trace most of our ills to their source, and it is found that

they exist by virtue of an easy-going, fatalistic indifference which dislikes to have its comfort disturbed....

The most shameless greed, the most sickening industrial atrocities, the most appalling public scandals are exposed, but a half-cynical and wholly indifferent public passes them by with hardly a shrug of the shoulders; and they are lost in the medley of events. This is the great American sin. The individual has always had to struggle to keep from being overwhelmed by the tribe. To be your own man is hard business. If you try it, you will be lonely often, and sometimes frightened. But no price is too high to pay for the privilege of owning yourself. While the populations of Europe and the US are fed raw propaganda about the regional aims involved, the reality is far different. Knife attacker slashed the throat of one person and injured two others while reportedly shouting "this is for Syria" More generally, I've been busy over the past years working in the background on collaborative Internet infrastructure in remote places. These are organised roughly along venture communist lines, and although

they exist by virtue of an easy-going, fatalistic indifference which dislikes to have its comfort disturbed....

The most shameless greed, the most sickening industrial atrocities, the most appalling public scandals are exposed, but a half-cynical and wholly indifferent public passes them by with hardly a shrug of the shoulders; and they are lost in the medley of events. shooter or citizen, PPU Ammo is good stuff, and highly affordable. New, boxer-primed, non-corrosive. Reloadable brass case. Topnotch ammo! Since 1961, Aguila has been dedicated to the development and manufacturing of high-quality self-defense, recreational, hunting, law enforcement, and military ammunition. Time to stock up! Load up with 50 rds. of Aguila .357 Magnum 158 Grain SJSP Ammo. Smooth feeding and straight shooting, Aguila ammo is a dependable choice for all your trigger-pulling needs, from plinking to self-defense. Aguila ammo is a dependable choice for all your trigger-pulling needs, from plinking to self-defense. Brass cased, Non-corrosive and current production. Caliber: .380 Auto. Bullet weight: 95 grain. Bullet style: FMJ. Head to the range or back 40, and let loose with this Geco .22LR LRN Ammo. Smooth feeding and straight shooting. Optimized for Bolt-action rifles. With Geco you get over a century of experience in development and production... which means top performance! Nail quantity buys on factory-fresh Russian Ammo for your .45 auto. Steel cases, non-corrosive, non-reloadable and Berdan-primed. 230 grain copper full metal jacket bullet. Primo American-made plinking / target-shooting Ammo, ready to shred paper! Current-production Rounds are brass-cased, boxer-primed, and reloadable. Loaded with 62 grain full metal jacket M855 bullet. Time to stock up! Load up with 50 rds. of Aguila .38 Special 130 Grain FMJ Ammo. Smooth feeding and straight shooting, Aguila ammo is a dependable choice for all your trigger-pulling needs, from plinking to self-defense. Plastic capsules. Design delivers a tighter pattern than crimped rounds. Non-corrosive, non-reloadable, lead shot with a precise powder charge for uniformity. Caliber: .22LR Ammo. Capsule Wt. Gms.: 31. For plinking or shooting, Sellier & Bellot brand is current Czech production. Brass-cased, 92 grain full metal jacket. Boxer-primed, reloadable, non-corrosive. Get Brown Bear bite for your gun! 123 grain, bi-metal full metal jacket Bullets are Berdan-primed, non-reloadable, non-corrosive. Lacquered steel case. Load up with 50 rds. of Aguila .38 Special 158 Grain JHP Ammo. Smooth feeding and straight shooting, Aguila ammo is a dependable choice for all your trigger-pulling needs, from plinking to self-defense.

Smooth feeding and straight shooting, Aguila ammo is known for their long history of quality assurance and exacting standards. It's ammo with consistent and dependable performance you can rely on, shot after shot. Less recoil with accurate and dependable performance! This Hornady Custom Lite .30-30 Win. 150 Grain Interlock RN Ammo reduces recoil and muzzle blast, and puts the fun back into shooting for kids, women, and every day shooters looking to keep recoil to a minimum. Russian Silver Bear Ammo, made in the prestigious JSC Barnaul Machine-Tool Plant! It's current production 145 grain FMJ, and an excess inventory opportunity, in limited amounts, makes it a steal. Topnotch ammo! Since 1961, Aguila has been dedicated to the development and manufacturing of high-quality self-defense, recreational, hunting, law enforcement, and military ammunition. Head to the range or back 40, and let loose with this Geco .38 Special LRN 158 grain Ammo. Smooth feeding and straight shooting. With Geco you get over a century of experience in development and production... which means top performance! Quality Rounds from Prvi Partizan (PPU), Serbia's premier munitions manufacturer. Brass-cased, boxer-primed. Reloadable and non-corrosive. CCI Blazer Centerfire: Speer bullets with reliable CCI primers. High-performance without high cost. For practice / training and target shooting. Scientifically, tears are divided into three different types, based on their origin. Both tears of grief and joy are psychic tears, triggered by extreme emotions, whether positive or negative. Basal tears are released continuously in tiny quantities (on average, 0.75 to 1.1grams over a 24-hour period) to keep the cornea lubricated. Reflex tears are secreted in response to an irritant, like dust, onion vapors or tear gas. All tears contain a variety of biological substances (including oils, antibodies and enzymes) suspended in salt water, but as Fisher saw, tears from each of the different categories include distinct molecules as well. Emotional tears, for instance, have been found to contain protein-based hormones including the neurotrans-

mitterleucine enkephalin, a natural painkiller that is released when the body is under stress. Additionally, because the structures seen under the microscope are largely crystallized salt, the circumstances under which the tear dries can lead to radically dissimilar shapes and formations, so two psychic tears with the exact same chemical makeup can look very different up close. There are so many variables-there's the chemistry, the viscosity, the setting, the same chemical makeup can look very different up close. There are so many variables-there's the chemistry, the viscosity, the setting, the evaporation

rate and the settings of the microscope. The Kohler plant has a history of intense battles, including a 1934 strike which resulted in the formation of a company union. After the workers abandoned company unionism for the UAW, one of the longest strikes in U.S. history commenced in 1954. Every time these battles are lost, it sends message that unions can't defend their members and the union movement is dead. Conversely, when workers win these fights, confidence in labor grows and organizing becomes a bit easier. Well before the crash of 2008 Peter Schiff of Euro Pacific Capital warned that the U.S. economic system was about to collapse. Mainstream pundits laughed him off the air. But within a matter of months his predictions came to pass. Solo travel is having a moment. Traveling alone means you can explore a destination in exactly the way that suits you. Here are our top tips and trips, whether you're an extrovert looking for a new circle of friends, an introvert looking for a quiet sojourn, or somewhere in between. The earthquake is located several hundred kilometers north of the India:Eurasia plate boundary, in the Pamir Mountains. The collision of these two tectonic plates drives the broad region surrounding the Himalayas and the Tibetan Plateau, and causes uplift that produces the highest mountain peaks in the world including the Himalayan, the Karakoram, the Pamir and the Hindu Kush ranges. Seismicity in the Himalaya dominantly results from the continental collision of the India and Eurasia plates, which are converging at a relative rate of 40-50 mm/yr. Northward underthrusting of India beneath Eurasia generates numerous earthquakes and consequently makes this area one of the most seismically hazardous regions on

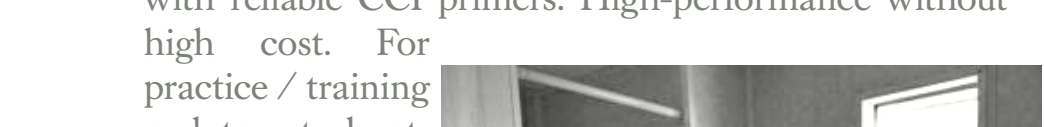

Earth. The surface expression of the plate boundary is marked by the foothills of the north-south trending Sulaiman Range in the west, the Indo-Burmese Arc in the east and the east-west trending Himalaya Front in the

north of India. The Tibetan Plateau is situated north of the Himalaya, stretching approximately 1000km north-south and 2500km east-west, and is geologically and tectonically complex with several sutures which are hundreds of kilometer-long and generally trend east-west. The Tibetan Plateau is cut by a number of large (>1000km) east-west trending, left-lateral, strike-slip faults, including the long Kunlun, Haiyuan, and the Altyn Tagh. Right-lateral, strike-slip faults (comparable in size to the left-lateral faults), in this region include the Karakorum, Red River,

and Sagaing. Secondary north-south trending normal faults also cut the Tibetan Plateau. Thrust faults are found towards the north and south of the Tibetan Plateau. Collectively, these faults accommodate crustal shortening associated with the ongoing collision of the India and Eurasia plates, with thrust faults accommodating north-south compression, and normal and strike-slip accommodating east-west extension. Along the western margin of the Tibetan Plateau, in the vicinity of south-eastern Afghanistan and western Pakistan, the India plate translates obliquely relative to the Eurasia plate, resulting in a complex fold-and-thrust belt known as the Sulaiman Range. Faulting in this region includes strike-slip, reverse-slip and oblique-slip motion and often results in shallow, destructive earthquakes. The active, left-lateral, strike-slip Chaman fault is the fastest moving fault in the region. In 1505, a segment of the Chaman fault near Kabul, Afghanistan, ruptured causing widespread destruction. In the same region the more recent 30 May 1935, M7.6 Quetta earthquake, which occurred in the Sulaiman Range in Pakistan, killed between 30,000 and 60,000 people.

On the north-western side of the Tibetan Plateau, beneath the Pamir-Hindu Kush Mountains of northern Afghanistan, earthquakes occur at depths as great as 200 km as a result of remnant lithospheric subduction. The curved arc of deep earthquakes found in the Hindu Kush Pamir region indicates the presence of a lithospheric body at depth, thought to be remnants of a subducting slab. Cross-sections through the Hindu Kush region suggest a near vertical northerly-dipping subducting slab, whereas cross-sections through the nearby Pamir region to the east indicate a much shallower dipping, southerly subducting slab. Some models suggest the presence of two subduction zones; with the Indian plate being subducted beneath the Hindu Kush region and the Eurasian plate being subducted beneath the Pamir region. However, other models suggest that just one of the two plates is being subducted and that the slab has become contorted and overturned in places. Shallow crustal earthquakes also occur in this region near the Main Pamir Thrust and other active Quaternary faults.

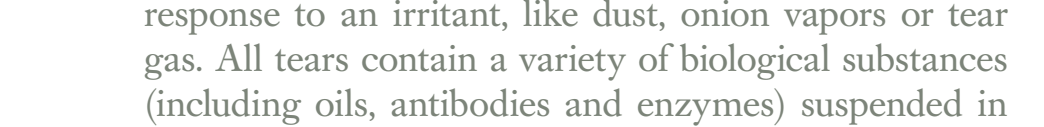

The Main Pamir Thrust, north of the Pamir Mountains, is an active shortening structure. The northern portion of the Main Pamir Thrust produces many shallow earthquakes, whereas its western and eastern borders display a combination of thrust and strike-slip mechanisms. On the 18 February 1911, the M7.4 Sarez earthquake ruptured in the Central Pamir Mountains, killing numerous people and triggering a landslide, which blocked the Murghab River. Further north, the Tian Shan is a seismically active intra-continental mountain belt, which extends 2500 km in an ENE-WNW orientation north of the Tarim Basin. This belt is defined by numerous east-west trending thrust faults, creating a compressional basin and range landscape. It is generally thought that regional stresses associated with the collision of the India and Eurasia plates are responsible for faulting in the region. The region has had three major earthquakes (>M7.6) at the start of the 20th Century, including the 1902 Atushi earthquake, which killed an estimated 5,000 people. The range is cut through in the west by the 700-km-long, north-west-southeast striking, Talas-Fergana active right-lateral, strike-slip fault system. Though the system has produced no major earthquakes in the last 250 years, paleo-seismic studies indicate that it has the potential to produce M7.0+ earthquakes and it is thought to represent a significant hazard. The northern portion of the Tibetan Plateau itself is largely dominated by the motion on three large left-lateral, strike-slip fault systems; the Altyn Tagh, Kunlun and Haiyuan. The Altyn Tagh fault is the longest of these strike-slip faults and it is thought to accommodate a significant portion of plate convergence. However, this system has not experienced significant historical earthquakes, though paleoseismic studies show evidence of prehistoric M7.0-8.0 events. Thrust faults link with the Altyn Tagh at its eastern and western termini. The Kunlun Fault, south of the Altyn Tagh, is seismically active, producing large earthquakes such as the 8th November 1997, M7.6 Manyi earthquake and the 14th November 2001, M7.8 Kokoxili earthquake. The Haiyuan Fault, in the far north-east, generated the 16 December 1920, M7.8 earthquake that

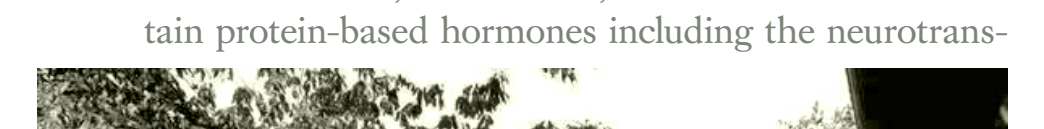

killed approximately 200,000 people and the 22 May 1927 M7.6 earthquake that killed 40,912. The Longmen Shan thrust belt, along the eastern margin of the Tibetan Plateau, is an important structural feature and forms a transitional zone between the complexly deformed Songpan-Garze Fold Belt and the relatively undeformed Sichuan Basin. On 12 May 2008, the thrust belt produced the reverse slip, M7.9 Wenchuan earthquake, killing over 87,000 people and causing billions of US dollars in damages and landslides which dammed several rivers and lakes. Shallow earthquakes within the Indo-Burmese Arc, predominantly occur on a combination of strike-slip and reverse faults, including the Sagaing, Kabaw and Dauki faults. Between 1930 and 1956, six M7.0+ earthquakes occurred near the right-lateral Sagaing Fault, resulting in severe damage in Myanmar including the generation of landslides, liquefaction and the loss of 610 lives. Deep earthquakes (200km) have also been known to occur in this region, these are thought to be due to the subduction of the eastwards dipping, India plate, though whether subduction is currently active is debated. Within the pre-instrumental period, the large Shillong earthquake occurred on the 12 June 1897, causing widespread destruction. The Paris climate summit, dominated by the economic and political forces that are driving us toward destruction, will end with the usual empty rhetoric and a continued assault on the ecosystem. One of my pet peeves, and I have many, is the constant comparisons about who is like who. Or is that whom. Most comparisons are hogwash or areso far off the mark as to be laughable. Many are used as a way to smear someone. Many are used because we can't think of anything worse than to be like someone in history. Or someone better. A man was arrested in Brooklyn this week for a string of 26 fire escape burglaries, mostly in Prospect-Lefferts Gardens and Flatbush, police said. A man was arrested in Brooklyn this week for a string of 26 fire escape burglaries, mostly in Prospect-Lefferts Gardens and Flatbush, police said. The burglary streak ended on Nov. 29 when Gordon was caught by a resident of 201 Linden Blvd. in the lobby of the building, carrying a pillowcase filled with two stolen laptops, a cellphone, a charger, a watch and \$414 in cash. The resident who spotted Gordon told police she had spotted Gordon on a fire escape outside her apartment the day before, on Nov. 28, according to court documents. Course topics range from basic filmmaking to specialized courses such as screenwriting;

One of my pet peeves, and I have many, is the constant comparisons about who is like who. Or is that whom. Most comparisons are hogwash or areso far off the mark as to be laughable. Many are used as a way to smear someone. Many are used because we can't think of anything worse than to be like someone in history. Or someone better. A man was arrested in Brooklyn this week for a string of 26 fire escape burglaries, mostly in Prospect-Lefferts Gardens and Flatbush, police said. A man was arrested in Brooklyn this week for a string of 26 fire escape burglaries, mostly in Prospect-Lefferts Gardens and Flatbush, police said. The burglary streak ended on Nov. 29 when Gordon was caught by a resident of 201 Linden Blvd. in the lobby of the building, carrying a pillowcase filled with two stolen laptops, a cellphone, a charger, a watch and \$414 in cash. The resident who spotted Gordon told police she had spotted Gordon on a fire escape outside her apartment the day before, on Nov. 28, according to court documents. Course topics range from basic filmmaking to specialized courses such as screenwriting;

Earth. The surface expression of the plate boundary is marked by the foothills of the north-south trending Sulaiman Range in the west, the Indo-Burmese Arc in the east and the east-west trending Himalaya Front in the

north of India. The Tibetan Plateau is situated north of the Himalaya, stretching approximately 1000km north-south and 2500km east-west, and is geologically and tectonically complex with several sutures which are hundreds of kilometer-long and generally trend east-west. The Tibetan Plateau is cut by a number of large (>1000km) east-west trending, left-lateral, strike-slip faults, including the long Kunlun, Haiyuan, and the Altyn Tagh. Right-lateral, strike-slip faults (comparable in size to the left-lateral faults), in this region include the Karakorum, Red River,

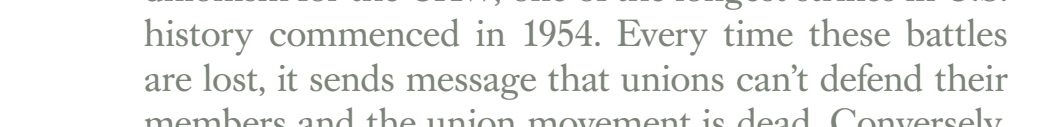

and Sagaing. Secondary north-south trending normal faults also cut the Tibetan Plateau. Thrust faults are found towards the north and south of the Tibetan Plateau. Collectively, these faults accommodate crustal shortening associated with the ongoing collision of the India and Eurasia plates, with thrust faults accommodating north-south compression, and normal and strike-slip accommodating east-west extension. Along the western margin of the Tibetan Plateau, in the vicinity of south-eastern Afghanistan and western Pakistan, the India plate translates obliquely relative to the Eurasia plate, resulting in a complex fold-and-thrust belt known as the Sulaiman Range. Faulting in this region includes strike-slip, reverse-slip and oblique-slip motion and often results in shallow, destructive earthquakes. The active, left-lateral, strike-slip Chaman fault is the fastest moving fault in the region. In 1505, a segment of the Chaman fault near Kabul, Afghanistan, ruptured causing widespread destruction. In the same region the more recent 30 May 1935, M7.6 Quetta earthquake, which occurred in the Sulaiman Range in Pakistan, killed between 30,000 and 60,000 people.

On the north-western side of the Tibetan Plateau, beneath the Pamir-Hindu Kush Mountains of northern Afghanistan, earthquakes occur at depths as great as 200 km as a result of remnant lithospheric subduction. The curved arc of deep earthquakes found in the Hindu Kush Pamir region indicates the presence of a lithospheric body at depth, thought to be remnants of a subducting slab. Cross-sections through the Hindu Kush region suggest a near vertical northerly-dipping subducting slab, whereas cross-sections through the nearby Pamir region to the east indicate a much shallower dipping, southerly subducting slab. Some models suggest the presence of two subduction zones; with the Indian plate being subducted beneath the Hindu Kush region and the Eurasian plate being subducted beneath the Pamir region. However, other models suggest that just one of the two plates is being subducted and that the slab has become contorted and overturned in places. Shallow crustal earthquakes also occur in this region near the Main Pamir Thrust and other active Quaternary faults.

The Main Pamir Thrust, north of the Pamir Mountains, is an active shortening structure. The northern portion of the Main Pamir Thrust produces many shallow earthquakes, whereas its western and eastern borders display a combination of thrust and strike-slip mechanisms. On the 18 February 1911, the M7.4 Sarez earthquake ruptured in the Central Pamir Mountains, killing numerous people and triggering a landslide, which blocked the Murghab River. Further north, the Tian Shan is a seismically active intra-continental mountain belt, which extends 2500 km in an ENE-WNW orientation north of the Tarim Basin. This belt is defined by numerous east-west trending thrust faults, creating a compressional basin and range landscape. It is generally thought that regional stresses associated with the collision of the India and Eurasia plates are responsible for faulting in the region. The region has had three major earthquakes (>M7.6) at the start of the 20th Century, including the 1902 Atushi earthquake, which killed an estimated 5,000 people. The range is cut through in the west by the 700-km-long, north-west-southeast striking, Talas-Fergana active right-lateral, strike-slip fault system. Though the system has produced no major earthquakes in the last 250 years, paleo-seismic studies indicate that it has the potential to produce M7.0+ earthquakes and it is thought to represent a significant hazard. The northern portion of the Tibetan Plateau itself is largely dominated by the motion on three large left-lateral, strike-slip fault systems; the Altyn Tagh, Kunlun and Haiyuan. The Altyn Tagh fault is the longest of these strike-slip faults and it is thought to accommodate a significant portion of plate convergence. However, this system has not experienced significant historical earthquakes, though paleoseismic studies show evidence of prehistoric M7.0-8.0 events. Thrust faults link with the Altyn Tagh at its eastern and western termini. The Kunlun Fault, south of the Altyn Tagh, is seismically active, producing large earthquakes such as the 8th November 1997, M7.6 Manyi earthquake and the 14th November 2001, M7.8 Kokoxili earthquake. The Haiyuan Fault, in the far north-east, generated the 16 December 1920, M7.8 earthquake that

killed approximately 200,000 people and the 22 May 1927 M7.6 earthquake that killed 40,912. The Longmen Shan thrust belt, along the eastern margin of the Tibetan Plateau, is an important structural feature and forms a transitional zone between the complexly deformed Songpan-Garze Fold Belt and the relatively undeformed Sichuan Basin. On 12 May 2008, the thrust belt produced the reverse slip, M7.9 Wenchuan earthquake, killing over 87,000 people and causing billions of US dollars in damages and landslides which dammed several rivers and lakes. Shallow earthquakes within the Indo-Burmese Arc, predominantly occur on a combination of strike-slip and reverse faults, including the Sagaing, Kabaw and Dauki faults. Between 1930 and 1956, six M7.0+ earthquakes occurred near the right-lateral Sagaing Fault, resulting in severe damage in Myanmar including the generation of landslides, liquefaction and the loss of 610 lives. Deep earthquakes (200km) have also been known to occur in this region, these are thought to be due to the subduction of the eastwards dipping, India plate, though whether subduction is currently active is debated. Within the pre-instrumental period, the large Shillong earthquake occurred on the 12 June 1897, causing widespread destruction. The Paris climate summit, dominated by the economic and political forces that are driving us toward destruction, will end with the usual empty rhetoric and a continued assault on the ecosystem. film and sound editing; special effects; and the business of producing, marketing, and negotiating deals for motion pictures. The Certificate in Film Studies is a basic professional program of study. Offered throughout the year, this program can also be completed during the summer through a

other way. My regrets with the case is that more of my co-defendants did not stick with us and move forward together-something that had been the idea when worst case scenarios had been discussed years prior. 10 years later, its obvious to me every time i go to any activist event that many younger activists do not know this history. I suppose it is the struggle we all face-how to remember and memorialize, but not live in the past and nostalgia. Storytellers are finding increasingly imaginative ways to share their ideas with interactive and visual elements, bringing their messages to life. Meet three major entrepreneurial players of the field, who will present their work and discuss how limitation can trigger creative opportunities. Brad Brace has exhibited nationally and internationally since 1971. Selected exhibitions include the Venice Biennale (1984), Documenta 8, Kassel, Germany (1987), the 8th Sydney Biennale, Sydney, Australia (1990), "Canadian Stories&rdquo; at the Ydessa Hendeles Art Foundation (2000-2002), and "Continental Drift: Conceptual Art in Canada: the 1960s and 70s&rdquo;., Badischer Kunstverein, Germany (2013). In 2007 he was named a Laureate of the Governor-General's Awards in the Visual and Media Arts. In 2012 he was recipient of the Life Achievement Award from the Toronto Friends of the Visual Arts. He is represented by the Susan Hobbs Gallery in Toronto and is professor emeritus at OCAD University. Most news these days gets paid for in one of two ways-advertising or well-heeled funders and investors-- neither is built to ensure a critical mass of the investigative journalism that our democracy needs. Advertising opens newsrooms up to pressure from corporations, not to mention "native ads" (ads that pretend to be stories). And big-time funders may seek to control the media organizations they invest in-or simply squeeze them for profit. In recent years, the Venezuelan economy has faced turbulence and rising inflation. Venezuela has the world's largest oil reserves, and the rapid drop in the price of oil has hit it particularly hard. The opposition, which blames the government's left-wing policies for the instability, has capitalized on the turmoil. Supporters of the government, on the other hand, say powerful business oligarchs, corporations, and foreign governments-- especially the U.S.-- have pursued policies of economic sabotage in Venezuela. This view is supported by the information revealed in U.S. government documents released by WikiLeaks. Although Venezuela's democratically elected socialist government has been widely characterized by the right wing as a "dictatorship," in 2012, former President Jimmy Carter -- who won a Nobel prize for his international election-monitoring work through the Carter Center -- remarked, "As a matter of fact, of the 92 elections that we've monitored, I would say that the election process in Venezuela is the best in the world." How do designers approach the brief when creating inspirational and incentive-filled spaces? The simple answer is: in a wide variety of ways. The Other Office 2 illustrates this with 80 cutting-edge workplace designs -- everything from compact hubs to multilevel corporate headquarters. It offers an exclusive peek into the workspaces of companies like Google, AirBNB, Rabobank and Wieden + Kennedy, and shows how these companies promote productivity through connectivity with the design of their workplace. This book also outlines the challenges that designers such as Gensler, Ippolito Fleitz, Neri&Hu and Schemata must overcome to be able to realise working environments that are crucibles for innovation and creativity. Hi, just a reminder that you're receiving this email because you have expressed an interest in Caribbean Airlines. Don't forget to add mail @caribbean-airlines.com to your address book so we'll be sure to land in your inbox! You may unsubscribe if you no longer wish to receive our emails. The structure of the evening includes viewing the four images of artwork, the booth shot and the artist's statement submitted by other anonymous artists who applied to the festivals. All applications are viewed without any identifying information, just like the jury sees it. As of February 23rd we will start with the 10 week course. 2 days a week in the lab (Monday & Tuesday) and a weekly evening lecture on Tuesday. You will build your own lab equipment based on Open Source designs in our FabLab. Grow the microbes from our collection (or your own)

huge role in influencing our national conversation on climate. Beijing has for the first time issued a red alert its highest warning for air pollution in China. Strict restrictions will be placed on vehicular traffic and factory operations including many of them being shut down. Some members of Congress are willing to force a government shutdown rather than fund reproductive healthcare or give safe haven to victims of terror. In recent years we've seen our legislature take up reactionary positions on what should be common-sense issues. And the current round of federal spending negotiations is no exception - it's at risk of being derailed by extremists. Your account has been limited. Resolve Now Good day i have a proposition for you kindly contact me on my private email for more details please email me on richpack77@gmail.com thank you. Richard. Iceland residents are bracing themselves for another strong winter storm, currently approaching with a central pressure of 955 hPa, Meteo Europe reports. The system is expected to bring hurricane force winds across the island by the end of December 7, 2015 (local time). The strongest storm in the last 18 years swept the Paraguay capital on December 4, 2015. Although powerful storm systems are not uncommon across Paraguay, the latest one severely affected a large part of the densely populated area, thus gaining on importance. The strongest storm in the last 18 years swept the Paraguay capital on December 4, 2015. Although powerful storm systems are not uncommon across Paraguay, the latest one severely affected a large part of the densely populated area, thus gaining on importance. A very strong and shallow earthquake registered by USGS as M7.2 hit sparsely populated mountainous area of Tajikistan at 07:50 UTC on December 7, 2015. The agency is reporting depth of 28.7 km (17.9 miles). EMSC is reporting M7.2 at a depth of 30 km (18.64 miles). Global Exchange stands with thousands of our allies from around the world in Paris, calling on global leaders to take immediate and just action on climate change. After the first week of negotiations, leaders have come up with a draft agreement. As we expected, the agreement does not go far enough in carbon emission cuts or in financing for developing nations to solve the global climate crisis. Once again it is clear, that we the people - grassroots activists, indigenous leaders, students, teachers, all of us - must lead, so that our leaders will follow. Global Exchange in partnership with Movement Rights (an organization that grew out of Global Exchange's Community Rights program) and the Indigenous Environmental Network-released a report. Journal of Contemporary Painting responds to the territory and practice of contemporary painting in its broadest sense, viewing painting as a context for discussion, exploring its history and influence, rather than as a medium specific debate. The JCP combines a thematic approach with an open call, each issue opening up and problematising pressing concerns in contemporary painting. As well as contributions to current debates on contemporary art, a particular feature of the Journal of Contemporary Painting is the publication of archival or newly translated texts alongside current responsive articles, based on the premise that contemporary painting cannot be understood without reflecting on its history. Dedication to understanding the nature and forms of painting research has also led to the inclusions of an original visual essay for every edition. Additionally we respond to current exhibitions, books and symposia, nationally and internationally, in our reviews section. Our aim is to be responsive to current debates in painting and related art practices, drawing from a wide geographical field and across discipline boundaries to provide a discursive space in which a range of subject specialisms can be brought to bear on the culture of painting. We are particularly interested in writing emerging from practice-based research as well as from academics working in different disciplines. The post is situated in the School of Art, Design and Architecture. The jobholder will work on research projects relating to public engagement and cultural leadership in the visual and performing arts. He/she will be able to work with leading practitioners and academics in the area of evaluating audience development, public engagement and cultural leadership. The research cuts across the areas of cultural policy, public art, curation, ethnography and social sciences. You should have a good honours degree, and experience in developing surveys and questionnaires, and supporting focus group research. The ability to contribute to this specific area of research is essential. The prosecution in the case of a Baltimore police officer charged in the death of a black man in custody said he would not have died had he received immediate medical help, while a defense lawyer attacked the findings of a medical examiner who ruled the death a homicide. Officer William Porter, 26, is accused of manslaughter in the April death of Freddie Gray from a spinal injury suffered while he was transported in a police van. His death triggered rioting in the city and fueled a U.S. debate on police tactics. Six years after selling off his art collection in a record-breaking "sale of the century", the French businessman and philanthropist Pierre Berge is now putting his renowned library under the hammer. The lover and business partner of the late designer Yves Saint Laurent told AFP he is putting up his entire collection for auction, one of the most priceless in private hands. The sale of the couple's art collection netted 342 million euros (\$361 million) in 2009 a year after the designer's death from a brain tumour, then the highest figure ever for the sale of a private collection. In the first of six sales which could raise a total of 40 million euros (\$42 million) for the charitable foundation he founded with Saint Laurent, 180 historic manuscripts and rare first editions including Saint Augustine's "Confessions" printed in Strasbourg in 1470, and the original 1580 edition of the philosopher Montaigne's "Essays" will be auctioned at Sotheby's in Paris on Friday. Demanding their voices be heard, their rights respected and that fossils fuels be left in the ground to spare humanity and Mother Earth, Indigenous people from around the world made their latest mark on the ongoing climate negotiations in Paris on Sunday by crossing the Bassin de la Villette in the heart of the French city, assembled in a flotilla of traditional boats, kayaks, and canoes. In addition to the action on Paris' largest lake, the groups also held a press event where they presented a joint declaration articulating their sacred and collective demand that in order to preserve balance and harmony with the planet's living systems, the ongoing COP21 climate talks must go further than powerful governments have so far allowed. When it comes to the disparities within the food system, the numbers are pretty stark. The 10 largest mega-corporations generate \$450 million annually in food sales. These companies' CEOs earn, on average, 12 times what their workers make. Of those food workers, women of color make less than half of the salaries of their male counterparts and are far more likely

U.S.-- have pursued policies of economic sabotage in Venezuela. This view is supported by the information revealed in U.S. government documents released by WikiLeaks. Although Venezuela's democratically elected socialist government has been widely characterized by the right wing as a "dictatorship," in 2012, former President Jimmy Carter -- who won a Nobel prize for his international election-monitoring work through the Carter Center -- remarked, "As a matter of fact, of the 92 elections that we've monitored, I would say that the election process in Venezuela is the best in the world." The structure of the evening includes viewing the four images of artwork, the booth shot and the artist's statement submitted by other anonymous artists who applied to the festivals. All applications are viewed without any identifying information, just like the jury sees it. As of February 23rd we will start with the 10 week course. 2 days a week in the lab (Monday & Tuesday) and a weekly evening lecture on Tuesday. You will build your own lab equipment based on Open Source designs in our FabLab. Grow the microbes from our collection (or your own)

tered by USGS as M7.2 hit sparsely populated mountainous area of Tajikistan at 07:50 UTC on December 7, 2015. The agency is reporting depth of 28.7 km (17.9 miles). EMSC is reporting M7.2 at a depth of 30 km (18.64 miles). Global Exchange stands with thousands of our allies from around the world in Paris, calling on global leaders to take immediate and just action on climate change. After the first week of negotiations, leaders have come up with a draft agreement. As we expected, the agreement does not go far enough in carbon emission cuts or in financing for developing nations to solve the global climate crisis. Once again it is clear, that we the people - grassroots activists, indigenous leaders, students, teachers, all of us - must lead, so that our leaders will follow. Global Exchange in partnership with Movement Rights (an organization that grew out of Global Exchange's Community Rights program) and the Indigenous Environmental Network-released a report. Journal of Contemporary Painting responds to the territory and practice of contemporary painting in its broadest sense, viewing painting as a context for discussion, exploring its history and influence, rather than as a medium specific debate. The JCP combines a thematic approach with an open call, each issue opening up and problematising pressing concerns in contemporary painting. As well as contributions to current debates on contemporary art, a particular feature of the Journal of Contemporary Painting is the publication of archival or newly translated texts alongside current responsive articles, based on the premise that contemporary painting cannot be understood without reflecting on its history. Dedication to understanding the nature and forms of painting research has also led to the inclusions of an original visual essay for every edition. Additionally we respond to current exhibitions, books and symposia, nationally and internationally, in our reviews section. Our aim is to be responsive to current debates in painting and related art practices, drawing from a wide geographical field and across discipline boundaries to provide a discursive space in which a range of subject specialisms can be brought to bear on the culture of painting. We are particularly interested in writing emerging from practice-based research as well as from academics working in different disciplines. The post is situated in the School of Art, Design and Architecture. The jobholder will work on research projects relating to public engagement and cultural leadership in the visual and performing arts. He/she will be able to work with leading practitioners and academics in the area of evaluating audience development, public engagement and cultural leadership. The research cuts across the areas of cultural policy, public art, curation, ethnography and social sciences. You should have a good honours degree, and experience in developing surveys and questionnaires, and supporting focus group research. The ability to contribute to this specific area of research is essential. The prosecution in the case of a Baltimore police officer charged in the death of a black man in custody said he would not have died had he received immediate medical help, while a defense lawyer attacked the findings of a medical examiner who ruled the death a homicide. Officer William Porter, 26, is accused of manslaughter in the April death of Freddie Gray from a spinal injury suffered while he was transported in a police van. His death triggered rioting in the city and fueled a U.S. debate on police tactics. Six years after selling off his art collection in a record-breaking "sale of the century", the French businessman and philanthropist Pierre Berge is now putting his renowned library under the hammer. The lover and business partner of the late designer Yves Saint Laurent told AFP he is putting up his entire collection for auction, one of the most priceless in private hands. The sale of the couple's art collection netted 342 million euros (\$361 million) in 2009 a year after the designer's death from a brain tumour, then the highest figure ever for the sale of a private collection. In the first of six sales which could raise a total of 40 million euros (\$42 million) for the charitable foundation he founded with Saint Laurent, 180 historic manuscripts and rare first editions including Saint Augustine's "Confessions" printed in Strasbourg in 1470, and the original 1580 edition of the philosopher Montaigne's "Essays" will be auctioned at Sotheby's in Paris on Friday. Demanding their voices be heard, their rights respected and that fossils fuels be left in the ground to spare humanity and Mother Earth, Indigenous people from around the world made their latest mark on the ongoing climate negotiations in Paris on Sunday by crossing the Bassin de la Villette in the heart of the French city, assembled in a flotilla of traditional boats, kayaks, and canoes. In addition to the action on Paris' largest lake, the groups also held a press event where they presented a joint declaration articulating their sacred and collective demand that in order to preserve balance and harmony with the planet's living systems, the ongoing COP21 climate talks must go further than powerful governments have so far allowed. When it comes to the disparities within the food system, the numbers are pretty stark. The 10 largest mega-corporations generate \$450 million annually in food sales. These companies' CEOs earn, on average, 12 times what their workers make. Of those food workers, women of color make less than half of the salaries of their male counterparts and are far more likely

to need nutrition assistance than workers in other industries. Black farmers have lost 80 percent of their land since 1920, while large-scale and corporate farms make nearly half the agricultural sales-despite accounting for less than five percent of all farms. Calgary's Vietnamese

community is coming together to help welcome and support the wave of refugees coming from war-torn Syria. Organizers put on a fund-raising dinner at a local Vietnamese restaurant and held a silent auction Thursday night. Their goal was to raise \$10,000 to help settle the refugees. Hundreds of thousands of people fled or were expelled from Vietnam after the end of the Vietnam War in 1975, with approximately 60,000 eventually reaching Canada. Those who came by boat became known as the Boat People. The case is being covered by the Bureau of Investigative Journalism as part of its long-running examination of the use of secret evidence in UK courts, including for counter-terrorism hearings. Such evidence is usually highly sensitive intelligence material. "A cancer that has no immediate cure" was not the most soothing metaphor President Obama could have chosen, but it was the most honest. He has no idea how to prevent another terrorist attack like the one in San Bernardino-and neither does anyone else, including his Republican critics. The release of the video was accompanied by a prepared statement from embattled Mayor Rahm Emanuel saying that the treatment of Philip Coleman while he was in custody in December 2012 was unacceptable. Coleman died following a reaction to an antipsychotic drug, but an autopsy showed that Coleman had experienced severe trauma, including more than 50 bruises and scrapes on his body from the top of his head to his lower legs. Hollywood and Nollywood are film industries recognized internationally. The United States film industry has largely been based in Hollywood, Los Angeles District in California, hence was given the name Hollywood. Nollywood is derived from Nigeria, and Hollywood, it is the name given to the Nigerian film industry. 6.30 PM. 25C that's cool weather for us...

Made some ladies finger curry to have with chapatis for dinner. Feeling hungry now and had a pre-dinner light snack - two pieces of toast with a slice of cheese and honey... Blueberry buckle, grits, grapefruit. Coffee. Winter continues to settle in nicely across northeastern Asia today, while central climes will see a slight warm-up form previous days. The south will stay hot and humid, with eyes turned to the tropics, where a new disturbance promises to bring much-needed rain to portions of the Philippines over the next 7-10 days. Initially designed to work at small sizes and to withstand the effects of high speed presses and cheap paper, FF Meta dispenses with the nonessential stuff, leaving behind economically fit, generously spaced forms, deceptively simple in appearance, clean and cheery in comportment. Live-in landlords are on the increase. On the surface, it might seem like a good arrangement for both parties, but dig a little deeper and tensions over communal areas

and etiquette can quickly arise. "I'm allergic to cats, which results in a nasty reaction around my eyes, but when I was away, the cat had come into my room and sat on my pillow," says Emma, who lived as a weekday lodger with a mother and daughter in Eastbourne while studying. "When I confronted the landlady, I was told 'It's the cat's room.'" Three years ago, arms experts spotted a single advanced Belgian rifle in the hands of militants in Gaza. But how had a group listed by the EU and the US as a terrorist organisation obtained the weapon? Arms expert Nic Jenzen-Jones and the BBC's Thomas Martiensen tracked its journey. Species Summary: Pink-footed Goose (4 Connecticut) Barnacle Goose (1 Quebec) Tufted Duck (2 Massachusetts, 2 Vermont) Flesh-footed Shearwater (1 Oregon) Brown Booby (2 California, 1 Texas) Kelp Gull (5 Ohio) Aplomado Falcon (1 Texas) Sinaloa Wren (1 Arizona) Rufous-backed

Robin (1 Arizona) Rufous-capped Warbler (1 Arizona, 2 Texas) Golden-crowned Warbler (2 Texas) White-collared Seedeater (1 Texas) Western Spindalis (8 Florida) From the time I studied communication at Mexico's National University, I wanted to practice journalism, the kind that could "change the world." At school, various professors, and even students younger than I was, used to tell me that as time passed I would lose the whole "change the world" thing. That in practice, things were different, and that journalism in Mexico was not only dangerous, but poorly paid. If you once forfeit the confidence of your fellow citizens, you can never regain their respect and esteem. The convention which framed the Constitution of the United States was composed of fifty-five members. A majority were lawyers not one farmer, mechanic or laborer. Forty owned Revolutionary Scrip. Fourteen were land speculators. Twenty-four were money-lenders. Eleven were merchants. Fifteen were slave-holders. They made a Constitution to protect the rights of property and not the rights of man. The things that will destroy America are prosperity-at-any-price, peace-at-any-price, safety-first instead of duty-first, the love of soft living, and the get-rich-quick theory of life. The vested interests - if we explain the situation by their influence - can only get the public to act as they wish by manipulating public opinion, by playing either upon the public's indifference, confusions, prejudices, or fears. And the only way in which the power of the interests can be undermined and their maneuvers defeated is by bringing home to the public the danger of its indifference, the absurdity of its prejudices, or the hollowness of its fears; by showing that it is indifferent to danger where real danger exists; frightened by dangers which are non-existent. Heavy rain, mountain snow, continue across parts of western U.S. Heavy rain will continue across the Pacific Northwest and Intermountain West as the next in a series of storms moves onshore. Snow will develop at the higher elevations across the Cascades and northern and central Rockies. Strong winds are also likely. Rain and snow will also spread into northern California and the northern Sierra. The Los Angeles Times-counteracted Obama's claim that the no-fly list should be

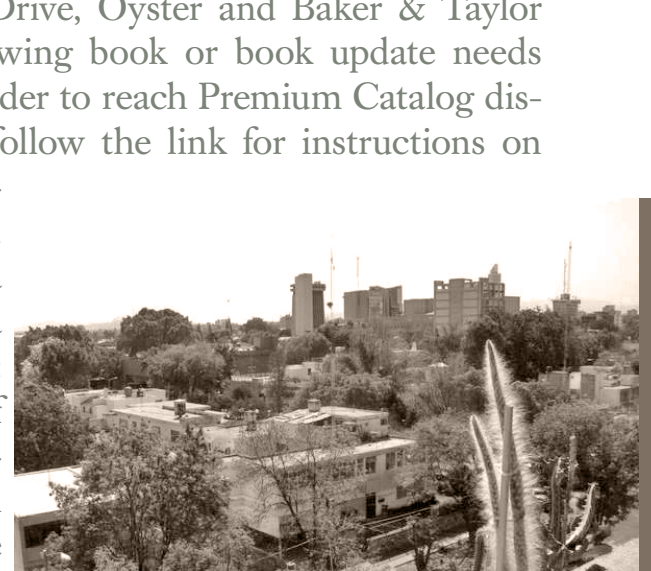

ing them. That is why Americans now, as much as ever, want to ensure they can exercise their Second Amendment freedoms to protect themselves and their families. At least 72 employees at the Department of Homeland Security are listed on the U.S. terrorist watch list, according to a Democratic lawmaker. Rep. Stephen Lynch (D, Mass.) disclosed that a congressional investigation recently found that at least 72 people working at DHS also were on the terrorist watch list. Back in August, we did an investigation-the inspector general did-of the Department of Homeland Security, and they had 72 individuals that were on the terrorist watch list that were actually working at the Department of Homeland Security., Standing in front of this small, rural shrine in Kidani, southern Okayama, was an unusual torii. I saw another at the shrine in the middle of the village, and my guess is they were constructed to house lanterns for matsuri. It is an Okazaki Shrine, and as there were no information boards. I presume it is a branch of the famous Okazaki Shrine in Kyoto. As such it enshrines 3 main kami. We notice that one of your books is awaiting modifications that will enable Premium Catalog distribution. Although the book listed below is available in the Smashwords Store, you want to achieve full Premium Catalog distribution to reach the most readers. 94% of our authors' and publishers' sales come from our retail distribution network which includes eBooks, Barnes & Noble, Kobo, Scribd, OverDrive, Oyster and Baker & Taylor Axis 360. The following book or book update needs modification in order to reach Premium Catalog distribution. Please follow the link for instructions on how to quickly resolve any issues. Producing tequila and mezcal is a wasteful process: 500,000 tonnes of agave fiber are discarded annually in the production of the two beverages. But a project funded by Conafor is studying the prospects for turning that waste into paper and cardboard. The United States Court of Appeals for the Second Circuit issued an opinion rejecting the government's attempt to hold an employee criminally liable under the federal hacking statute-the Computer Fraud and Abuse Act (CFAA.)-for violating his employer-imposed computer use restrictions. The decision is important because it ensures that employers and website owners don't have the power to criminalize a broad range of innocuous everyday behaviors, like checking personal email or the score of a baseball game, through simply adopting use restrictions in their corporate policies or terms of use. The court also ruled that the government cannot hold people criminally liable on the basis of purely fantastical statements they make online-i.e., thoughtcrime. The rise of Uber has convinced many pundits, economists, and policymakers that freelancing via digital platforms is becoming increasingly important to Americans' livelihood. It has also promoted the idea that new technology-particularly the explosion of platforms enabling the gig economy-will fundamentally alter the future of work. Uber is frequently in the news, and digital-freelancing platforms garner a lot of attention, but evidence of an exploding gig economy is, as they say, showing up everywhere but the data. It seems like everyone is talking about the power of big data and how it is helping companies, governments, and organizations make better and more efficient decisions. But rarely do they mention that big data can actually perpetuate and exacerbate existing systems of racism, discrimination, and inequality. While we're lead to believe that data doesn't lie-and therefore, that algorithms that analyze the data can't be prejudiced-that isn't always true. The origin of the prejudice is not necessarily embedded in the algorithm itself: Rather, it is in the models used to process massive amounts of available data and the adaptive nature of the algorithm. As an adaptive algorithm is used, it can learn societal biases it observes. Greed for petroleum has produced plenty of war. War can be defined narrowly, as conflict between nations, or broadly, as large-scale violence in pursuit of gain. This is why so many see the climate movement as a peace movement - especially after the recent massacres in Paris. In the fossil-fuel era, some oil corporations became powers equal to states, and some states became petroleum corporations in drag, and both were eager to fight horrific wars over resource control. The abuse of power and the destruction go all the way back to the early history of

puter use restrictions. This is why so many see the climate movement as a peace movement - especially after the recent massacres in Paris. In the fossil-fuel era, some oil corporations became powers equal to states, and some states became petroleum corporations in drag, and both were eager to fight horrific wars over resource control. The abuse of power and the destruction go all the way back to the early history of

and exacerbate existing systems of racism, discrimination, and inequality. While we're lead to believe that data doesn't lie-and therefore, that algorithms that analyze the data can't be prejudiced-that isn't always true. The origin of the prejudice is not necessarily embedded in the algorithm itself: Rather, it is in the models used to process massive amounts of available data and the adaptive nature of the algorithm. As an adaptive algorithm is used, it can learn societal biases it observes. Greed for petroleum has produced plenty of war. War can be defined narrowly, as conflict between nations, or broadly, as large-scale violence in pursuit of gain. This is why so many see the climate movement as a peace movement - especially after the recent massacres in Paris. used in background checks by pointing to the imprecision of the list and the fact that those on it have not been convicted of doing anything wrong. Therefore, barring people on the list from buying guns is the equivalent of barring any American from exercising a constitutional right based on an allegation. The National Rifle Association is the nation's oldest civil right organization whose strength lies in the grassroots support of our 5 million dues-paying members and tens-of-millions more who want their Second Amendment rights protected. The National Rifle Association is not to blame for the San Bernardino terrorist attack, or any other act of violence and neither are our Second Amendment freedoms. The American people understand that an act of evil unfolded in California. They know the government isn't protect-

the public. It includes all the various ways that the Pentagon tells its own story to the world. Concerns have been raised about the ability of terrorists to enter the United States under the VWP, because those entering under the VWP undergo a biographic rather than a biometric (i.e., fingerprint) security screening, and do not need to interview with a U.S. government official before embarking to the United States," a newly updated report from the Congressional Research Service observes. "Nonetheless, it can be argued that the VWP strengthens national security because it sets standards for travel documents, requires information sharing between the member countries and the United States on criminal and security concerns, and mandates reporting of lost and stolen travel documents. In addition, most VWP travelers have to present e-passports (i.e., passports with a data chip containing biometric information), which tend to be more difficult to alter than other types of passports," CRS wrote. See Visa Waiver Program, updated December 4, 2015. Species

Summary: Pink-footed Goose (1 Connecticut) Barnacle Goose (1 Quebec) Tufted Duck (1 Massachusetts, 1 Newfoundland and Labrador) Brown Booby (2 California, 1 Florida) Brown Booby (Brewster's) (1 Oregon) Kelp Gull (8 Ohio) Aplo-mado Falcon (2 Texas) Yellow-green Vireo (1 Texas) Sinaloa Wren (1 Arizona) Rufous-backed Robin (1 Arizona) Golden-crowned Warbler (1 Texas) White-collared Seedeater (2 Texas) Western Spindalis (9 Florida) If you're like most creative firms, you spend more time managing projects than you do on creative work. Get your time back with the proven timesheets and project tracking system that has helped thousands of creatives do more with their limited time. Success Ingredients: 1 part Dedication 1 part Great

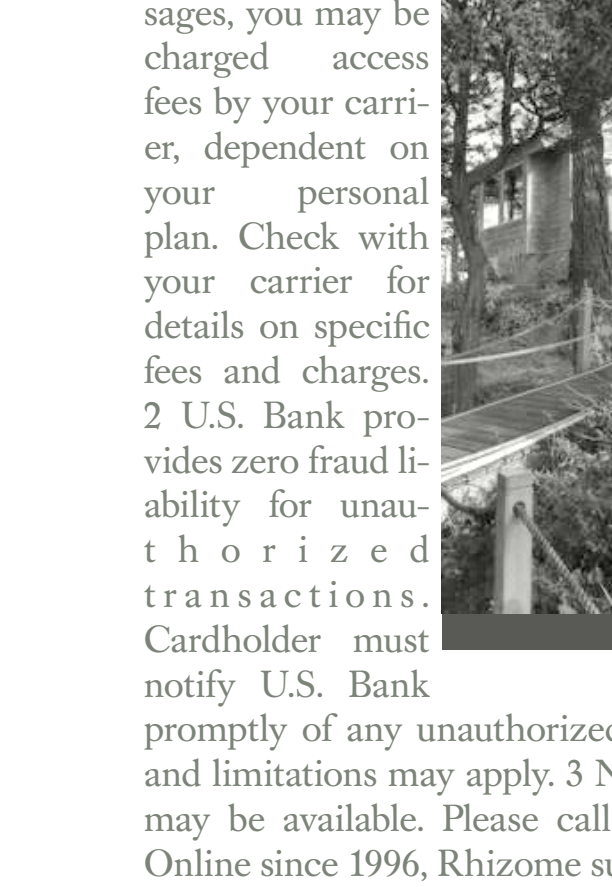

People 1 part Creative Genius (regular creativity works if your local grocer is out of genius.) 1 part Attention to Detail 1 part Coffee (substitute Red Bull, Soy latte, herbal tea or whiskey to taste.) Directions: Bring great people together with dedication. Let them marinate in coffee (or liquid of choice). Pre-heat the office to 68 degrees, fold in creative genius and let the ideas fly. Stay on top of everything while keeping the quality top notch using Attention to Detail and TimeFox software. Let stand then deliver to clients on time and on budget. Founded in 2008, the International Conference on the Inclusive Museum brings together a community of museum practitioners, researchers, and thinkers. The key question addressed by the conference: How can the institution of the museum become more inclusive? In this time of fundamental social change, what is the role of the museum, both as a creature of that change, and perhaps also as an agent of change? We invite proposals for paper presentations, workshops/interactive sessions, posters/exhibits, colloquia, virtual posters, or virtual lightning talks. For more information regarding the conference, use the links below to explore our conference website. When it comes to service and security, you can count on us to be there when you need us, to help keep your account safe, and to provide the personalized service you deserve. We're helping to protect your account - Actively monitoring for fraud and sending automatic alerts.π We've got you covered - Get reimbursed for 100% of fraud losses due to unauthorized use of your account.≤ We're available 24/7 - Just press zero and talk with one of our U.S.-based customer service representatives. You pick your payment date - Make it work with your schedule and budget.≥ 1 If you haven't already provided us with your mobile phone number, please provide it by calling the number on the back of your card so we can automatically contact you. For text messages, you may be charged access fees by your carrier, dependent on your personal plan. Check with your carrier for details on specific fees and charges. 2 U.S. Bank provides zero fraud liability for unauthorized transactions. Cardholder must notify U.S. Bank promptly of any unauthorized use. Certain conditions and limitations may apply. 3 Not all payment due dates may be available. Please call for further information. Online since 1996, Rhizome supports contemporary art that creates richer and more critical digital cultures. And we approach our 20th anniversary with a newly relaunched website and an exciting program of online exhibitions, commissions, public events, and digital pres-

port 449733] in the subject line on all further correspondence. The United Nations Institute for Training and Research (UNITAR) offers online and face-to-face courses on Multilateral Diplomacy. These courses are targeted to diplomats and government officials who are involved in international negotiations, and professionals who are working in an international environment. We offer fellowships and discounted fees for group bookings. Please do not hesitate to contact us if you need further assistance. The future risks associated with these drivers, according to IPCC, include loss of adaptive capacity and damages to ecosystem services critical to lives and livelihoods in small islands. In addition, sea-level rise are mentioned as posing one of the most widely recognized climate change threats to low-lying coastal areas on islands and atolls. Furthermore, given the dependence of island communities on coral reef ecosystems for a range of services including coastal protection, subsistence fisheries and tourism, there is high confidence that coral reef ecosystem degradation will negatively impact island communities and livelihoods. Given the inherent physical characteristics of small islands, AR5 reconfirms the high level of vulnerability of small islands to multiple stressors, both climate and non-climate. These elements illustrate the fact that, in addition to the necessary measures in the field of environmental mitigation, adaptation approaches are urgently needed. The above state of affairs illustrates the need for a better understanding of how climate change affects the Pacific region, and for the identification of processes, methods and tools which may help the countries in the region to adapt. There is also a perceived need to showcase successful examples of how to cope with the social, economic and political problems posed by climate change in Pacific countries. Today, Toronto, Ontario became the 100th community to pass a Blue Dot municipal environmental rights declaration - a significant step towards ensuring that all levels of government recognize your right to breathe fresh air, drink clean water, eat safe food and have a say in the decisions that affect your health and well-being. OK, thanks again. The hotel in which Edna and I visit for

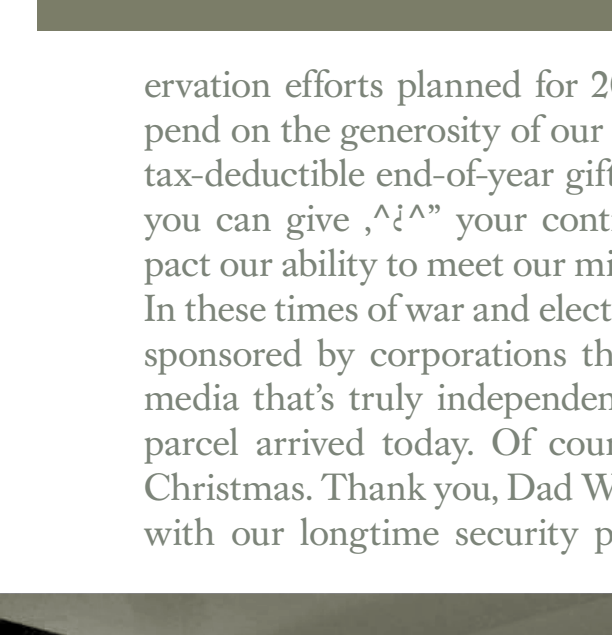

that reason, as part of your hosting package we'll be including a basic malware scan for your domains that don't currently have SiteLock, free of charge. This scan will identify known malware and acts as a simple "alarm system" by sending you an email alert as soon as something malicious has been detected, giving you time to react prior to being blacklisted by search engines. To provide more information on this scan, and to address any concerns you may have about its legitimacy, we've created this article, which offers additional details. For other ways to secure your website, please feel free to reach out to our trusted security advisors at 877-563-2849 today. The path of least resistance and least trouble is a mental rut already made. It requires troublesome work to undertake the alternation of old beliefs. Self-conceit often regards it as a sign of weakness to admit that a belief to which we have once committed ourselves is wrong. We get so identified with an idea that it is literally a "pet" notion and we rise to its defense and stop our eyes and ears to anything different. Those with no sides and no causes. Those who won't take measure of their own weakness, for fear of antagonizing their own weakness. Those who don't like to make waves or enemies. Those for whom freedom, honour, truth, and principles are only literature. Those who live small, small, die small. It's the reductionist approach to life: if you keep it small, you'll keep it under control. If you don't make any noise, the bogeyman won't find you. But it's all an illusion, because they die too, those people who roll up their spirits into tiny little balls so as to be

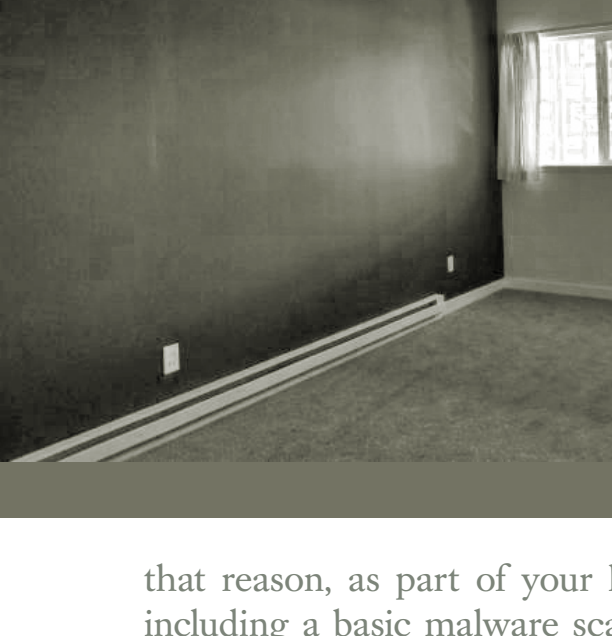

safe. Safe?! From what? Life is always on the edge of death; narrow streets lead to the same place as wide avenues, and a little candle burns itself out just like a flaming torch does. I choose my own way to burn. To really make the U.S. safe from israeli terrorism, Washington will have to dump Israel, play hardball with Saudi Arabia, and swear off the regime-change policy. Three instruments called airbeams are installed outside the entrance of the museum to take in air samples and analyze the amount of particulates in the surrounding air. They generate data that is then converted to imagery and animation by a custom computer program and sent to the media facade of the museum, where it is visualized in in bursts of bright color over a constant background of falling

blue light. Increasing frequency and size of the spots of color indicates a greater concentration of particles. The visualization updates with new particulate data every 15 seconds. Make a donation to Neighborhood Houseon December 10 through the Give!Guide and you'll be entered in a drawing to win an 80-person Salt & Straw Ice Cream party at Pips & Bounce Ping Pong Bar for you and your friends. Donations of essential items such as toiletries, hygiene supplies, household items and gift cards will help struggling neighbors this season. Visit our website for a complete list of most needed items. For more information, email us at volunteers@nhweb.org or call (503) 246-1663 x2118. As decided in 2011 in Durban, the COP21 term of reference is to reach a global agreement allowing to stabilize the average global temperature below +2C by 2100. After one week of negotiations, everything indicates that COP21 negotiators are failing to answer this essential term of reference. Conversely, the country greenhouse gas emissions reduction pledges would induce an average global temperature increase of 3C, which would irreversibly drive us into climate chaos. The lack of legally binding commitments on global greenhouse gas emission reduction pledges between 2015

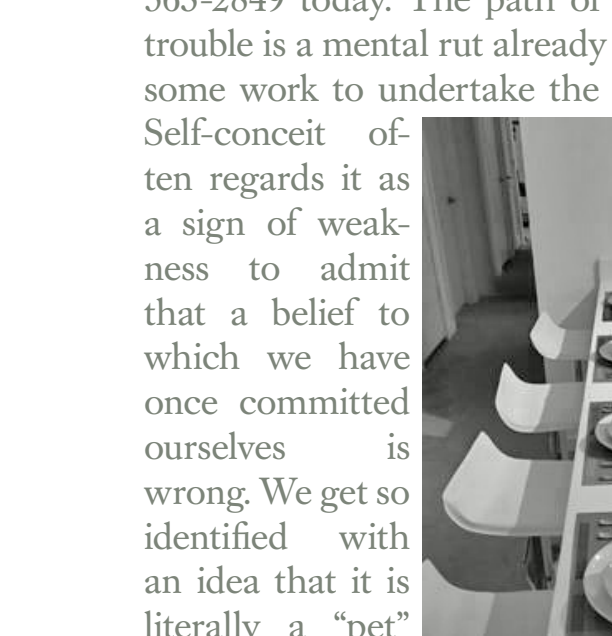

and 2020 in the draft agreement confirms that COP21 will lead to a global temperature increase higher than 2C. The leaders of the world, namely from the Northern countries that are historically responsible of the climate crisis, are not equal to the ambition we need to espouse to tackle the current climate challenge. However, climatologists tell us that we have only a few years left to act on climate change to prevent climate chaos. Thank you for contacting Common Ground Publishing. This is an automatic response to your email regarding Re: Call for Papers: The Inclusive Museum Conference, 16-19 September, Cincinnati, USA, a summary of which appears below. Our support staff will respond to your request in the order it was received during our normal business hours, Monday through Friday. Thank you for your patience. Your request number is [Support 449733]. You may update your request by responding to this email; please be sure to retain the [Sup-

Christmas dinner has been sold to Doubletree. I phoned to confirm the reservations and got some U.S. Answering service. No reservation. I drove downtown and checked in person and found everything was okay. Edna would have been very disappointed. Nancy Springer brought me a serving of meat lasagna this morning. Enjoyed it very much for dinner. Will the senior centre serve Christmas dinner? What are the plans? Heavy rain will move into northern California as a series of storms moves across the area. Heavy snow and strong winds will cause hazardous travel over the mountain passes of the Sierra. Snow will also spread into the Great Basin and northern Rockies. Another weather system will bring a mix of snow and rain to the northern Plains and Great Lake States. A 68-year old clerk was working at Towson Wine & Spirits in Towson, Md. when two men entered and attempted to rob the store. One of the thieves drew a gun and pointed it at the clerk, who responded by retrieving a handgun from a drawer and shooting the criminal. The robbers fled the scene, but the wounded criminal collapsed and died just outside the store. As we start to head into the end of the work week, we find a complicated weather scenario across much of Asia, with cold air and wintry conditions to the north, milder and wetter conditions in the middle, and summertime heat in the south. As usual, this year the disinformation by the opposition media has been intense. The opposition's main campaigning was through local and international media and social media, with very little street campaigning. Overall though, this loss, while it is a big step back for the progressive cause, it isn't the end of the line. The global struggle for a world that puts people and planet first, for a democratically controlled economy and so on, is a long term one with many ups and downs, defeats and victories. I have an itinerary I follow every day. I'm not supposed to stray from it, and I don't. We're not allowed to go in stores. We're not supposed to go in Dunkin Donuts and get a coffee or nothing like that. You go straight to work and come back. There are things I can't do. I can't even strike up a conversation with a woman that I see that I'm attracted to. I can, but I don't want to, because I'm still in prison. Last night, there's a woman sitting there with her computer-everybody brings computers into Panera Bread. I don't have a cell phone so I couldn't give my number, and I don't have an address yet. I wonder how I'll be accepted outside. When they find out where I'm from, and my past. I have that blemish on me. Once a prisoner, that's there forever. No matter what you do, no matter how good you do. It's just always there. I don't know if my life-time parole is going to be a battle with the parole officer. I've heard horror stories. Some people had parole officers that were all over them all the time. So I'm going out there after all these years and I really don't know what to expect. Framing free speech and political correctness as opposing forces is a false dichotomy intended to derail uncomfortable but necessary conversations, a smoke-screen ginned up by the ethically lazy. The fact is, political correctness doesn't hinder free speech, it expands it. But for marginalized groups, rather than the status quo. It would outright ban offshore drilling, ban Arctic drilling, block natural gas exports, stop attempts to lift a decades-old ban on crude oil exports, support states try-

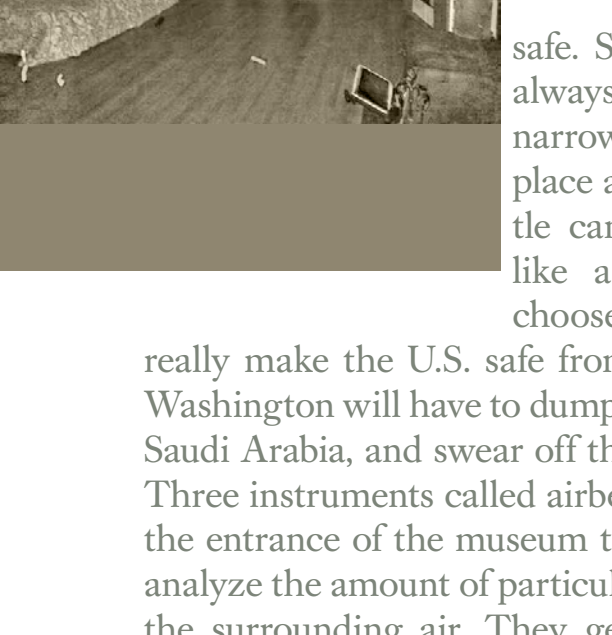

safe. Safe?! From what? Life is always on the edge of death; narrow streets lead to the same place as wide avenues, and a little candle burns itself out just like a flaming torch does. The global struggle for a world that puts people and planet first, for a democratically controlled economy and so on, is a long term one with many ups and downs, defeats and victories. I have an itinerary I follow every day. I'm not supposed to stray from it, and I don't. We're not allowed to go in stores. We're not supposed to go in Dunkin Donuts and get a coffee or nothing like that. You go straight to work and come back. There are things I can't do. I can't even strike up a conversation with a woman that I see that I'm attracted to. I can, but I don't want to, because I'm still in prison. Last night, there's a woman sitting there with her computer-everybody brings computers into Panera Bread. I don't have a cell phone so I couldn't give my number, and I don't have an address yet. I wonder how I'll be accepted outside. When they find out where I'm from, and my past. I have that blemish on me. Once a prisoner, that's there forever. No matter what you do, no matter how good you do. It's just always there. I don't know if my life-time parole is going to be a battle with the parole officer. I've heard horror stories. Some people had parole officers that were all over them all the time. So I'm going out there after all these years and I really don't know what to expect. Framing free speech and political correctness as opposing forces is a false dichotomy intended to derail uncomfortable but necessary conversations, a smoke-screen ginned up by the ethically lazy. The fact is, political correctness doesn't hinder free speech, it expands it. But for marginalized groups, rather than the status quo. It would outright ban offshore drilling, ban Arctic drilling, block natural gas exports, stop attempts to lift a decades-old ban on crude oil exports, support states try-

blue light. Increasing frequency and size of the spots of color indicates a greater concentration of particles. The visualization updates with new particulate data every 15 seconds. Make a donation to Neighborhood Houseon December 10 through the Give!Guide and you'll be entered in a drawing to win an 80-person Salt & Straw Ice Cream party at Pips & Bounce Ping Pong Bar for you and your friends. Donations of essential items such as toiletries, hygiene supplies, household items and gift cards will help struggling neighbors this season. Visit our website for a complete list of most needed items. For more information, email us at volunteers@nhweb.org or call (503) 246-1663 x2118. As decided in 2011 in Durban, the COP21 term of reference is to reach a global agreement allowing to stabilize the average global temperature below +2C by 2100. After one week of negotiations, everything indicates that COP21 negotiators are failing to answer this essential term of reference. Conversely, the country greenhouse gas emissions reduction pledges would induce an average global temperature increase of 3C, which would irreversibly drive us into climate chaos. The lack of legally binding commitments on global greenhouse gas emission reduction pledges between 2015

and 2020 in the draft agreement confirms that COP21 will lead to a global temperature increase higher than 2C. The leaders of the world, namely from the Northern countries that are historically responsible of the climate crisis, are not equal to the ambition we need to espouse to tackle the current climate challenge. However, climatologists tell us that we have only a few years left to act on climate change to prevent climate chaos. Thank you for contacting Common Ground Publishing. This is an automatic response to your email regarding Re: Call for Papers: The Inclusive Museum Conference, 16-19 September, Cincinnati, USA, a summary of which appears below. Our support staff will respond to your request in the order it was received during our normal business hours, Monday through Friday. Thank you for your patience. Your request number is [Support 449733]. You may update your request by responding to this email; please be sure to retain the [Sup-

port 449733] in the subject line on all further correspondence. The United Nations Institute for Training and Research (UNITAR) offers online and face-to-face courses on Multilateral Diplomacy. These courses are targeted to diplomats and government officials who are involved in international negotiations, and professionals who are working in an international environment. We offer fellowships and discounted fees for group bookings. Please do not hesitate to contact us if you need further assistance. The future risks associated with these drivers, according to IPCC, include loss of adaptive capacity and damages to ecosystem services critical to lives and livelihoods in small islands. In addition, sea-level rise are mentioned as posing one of the most widely recognized climate change threats to low-lying coastal areas on islands and atolls. Furthermore, given the dependence of island communities on coral reef ecosystems for a range of services including coastal protection, subsistence fisheries and tourism, there is high confidence that coral reef ecosystem degradation will negatively impact island communities and livelihoods. Given the inherent physical characteristics of small islands, AR5 reconfirms the high level of vulnerability of small islands to multiple stressors, both climate and non-climate. These elements illustrate the fact that, in addition to the necessary measures in the field of environmental mitigation, adaptation approaches are urgently needed. The above state of affairs illustrates the need for a better understanding of how climate change affects the Pacific region, and for the identification of processes, methods and tools which may help the countries in the region to adapt. There is also a perceived need to showcase successful examples of how to cope with the social, economic and political problems posed by climate change in Pacific countries. Today, Toronto, Ontario became the 100th community to pass a Blue Dot municipal environmental rights declaration - a significant step towards ensuring that all levels of government recognize your right to breathe fresh air, drink clean water, eat safe food and have a say in the decisions that affect your health and well-being. OK, thanks again. The hotel in which Edna and I visit for

Christmas dinner has been sold to Doubletree. I phoned to confirm the reservations and got some U.S. Answering service. No reservation. I drove downtown and checked in person and found everything was okay. Edna would have been very disappointed. Nancy Springer brought me a serving of meat lasagna this morning. Enjoyed it very much for dinner. Will the senior centre serve Christmas dinner? What are the plans? Heavy rain will move into northern California as a series of storms moves across the area. Heavy snow and strong winds will cause hazardous travel over the mountain passes of the Sierra. Snow will also spread into the Great Basin and northern Rockies. Another weather system will bring a mix of snow and rain to the northern Plains and Great Lake States. A 68-year old clerk was working at Towson Wine & Spirits in Towson, Md. when two men entered and attempted to rob the store. One of the thieves drew a gun and pointed it at the clerk, who responded by retrieving a handgun from a drawer and shooting the criminal. The robbers fled the scene, but the wounded criminal collapsed and died just outside the store. As we start to head into the end of the work week, we find a complicated weather scenario across much of Asia, with cold air and wintry conditions to the north, milder and wetter conditions in the middle, and summertime heat in the south. As usual, this year the disinformation by the opposition media has been intense. The opposition's main campaigning was through local and international media and social media, with very little street campaigning. Overall though, this loss, while it is a big step back for the progressive cause, it isn't the end of the line. The global struggle for a world that puts people and planet first, for a democratically controlled economy and so on, is a long term one with many ups and downs, defeats and victories. ing to ban natural gas fracking, and ban mountaintop removal coal mining. Why So Many People Flee Honduras and Guatemala, Decade After Decade After 21 years with Rights Action, I continue to be moved by the courage, tenderness and tenacity of people across Guatemala and Honduras

in these two countries, in our so unjust, unequal and interconnected human community, on this our only planet. Murder, Repression, Impunity and (now) Corruption Capitals of the Americas For years, Guatemala and Honduras have been known as murder, repression and impunity capitals of the Americas. In 2015, government corruption scandals rocked both countries. Guatemalan President Otto Perez Molina and Vice-President Baldetti have been forced from office and are in jail pending charges of heading a

corruption network -- La Linea -- that stole over \$120,000,000 in public funds. Honduran President Orlando Hernandez is linked to a corruption network that stole over \$300,000,000 in public sector funds. To date, he remains in office, as do most of the officials that

profited from the crime network -- the same elite sectors that carried out the 2009 military coup. Forced Migration Endemic exploitation and repression, impunity and corruption are the conditions that force tens of thousands of people to flee, decade after decade, and try to enter the United States. Close to ten million forced migrants reside in legal limbo in the U.S; many of the thousands who have been deported back to Honduras and Guatemala, have been killed (!) upon arriving back

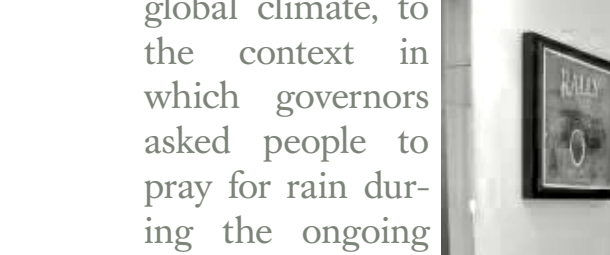

in the places and conditions they had fled from. Courage, Tenderness, Tenacity Despite such violent and unjust living conditions, hundreds of thousands of people have been regularly marching in the streets, in both countries, demanding justice for the corruption, repression and impunity networks, demanding fundamental reforms to how their governments and societies operate. Along with like-minded groups across Canada and the U.S., Rights Action is asking when will the Canada Pension Plan (CPP),

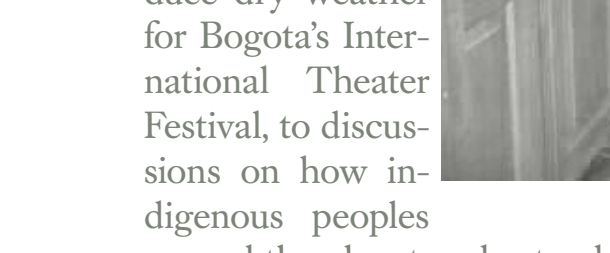

and all pension funds and private investment funds, implement enforceable human rights, environmental and health standards in their investment criteria, and thus be obliged to stop investing in companies that are operating in harmful, exploitative, repressive countries and conditions? This panel congregates papers that explore forms of understanding, experiencing, and producing the atmosphere that do not replicate those often seen in the central

Western debates and in mainstream global media. The ways through which different peoples and cultural traditions "make" climate, and what they make of climate, varies tremendously around the planet. Understanding these forms of engagement with the atmosphere may make explicit many of the presuppositions that ground Western atmospheric imaginaries but remain invisible. Secondly, it may illuminate the complexities of how climate change is perceived and lived at the ground

level, and how action in such "local" scale interacts with efforts in tackling the issue at larger scales. And third, it may offer new ideas, metaphors, and sources of inspiration for the urgent collective task of producing a future that differs from scientifically predicted worst-case scenarios, in face of the exhaustion of both state-centered

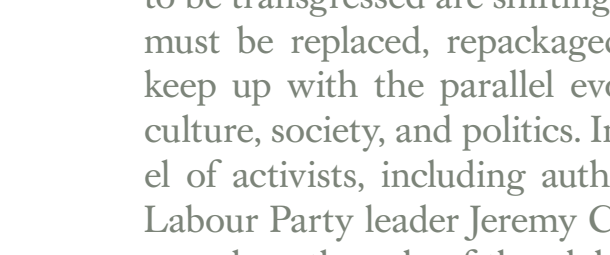

and market-driven approaches to the crisis. Case studies range from the discussion of the reasons countries like Brazil are developing "national" computer models to predict the global climate, to the context in which governors asked people to pray for rain during the ongoing drought in South-west United States, to the employment of shamanistic rituals to produce dry weather for Bogota's International Theater Festival, to discussions on how indigenous peoples

around the planet understand (and react to) the issue of geoengineering, and so on. I'm a banker and I want us to discuss about a project that will be of benefit to the both of us. You will get 40% of the fund and 60% for me. Reply for details. James Electronic media exemplifies the dual meaning of revolution: to always create new while returning to the old. In this dynamic, where multiple centers and margins compete for attention, and borders

to be transgressed are shifting, paradigms and practices must be replaced, repackaged and re-appropriated to keep up with the parallel evolutions in art, creativity, culture, society, and politics. In Paris on Monday, a panel of activists, including author Naomi Klein and UK Labour Party leader Jeremy Corbyn, spoke to a packed crowd on the role of the global labor sector in the climate justice movement and called for mass civil disobedience to break French President Francois Hollande's ban on demonstrations during the COP21 summit. Klein spoke candidly about the global climate agreement being

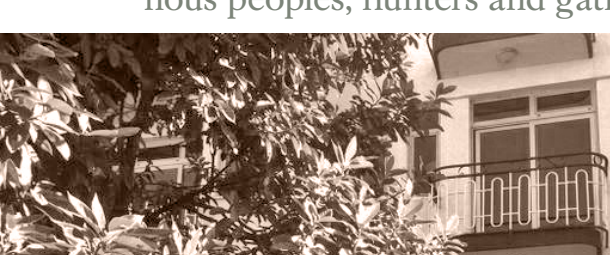

hammered out by world leaders this month, stating, "The deal that will be unveiled in less than a week will not be enough to keep us safe. In the climate talks blue zone, in the Parisian district of Le Bourget, are the governments, their advisers and lawyers, big business and the financiers. Facebook has a stall, along with UN agencies and scientific bodies. But the world's 4 billion small farmers, fishermen and women, indigenous peoples, hunters and gatherers, rural workers, pastoralists, and young people on the frontline of climate change, inhabit the green zone, beyond the fence where the decision-makers do not go. A surge of indigenous and allied resistance is challenging pipelines, logging, mining, and development in BC and across western Canada. This list is compiled to keep track of current, ongoing, and flying blockades. Injunction and arrests at Shawnigan Lake, Vancouver Island: Community residents, indigenous people, are rallying to protect their water. The Shawnigan Residents Association is seeking an injunction to shut down toxic soil dumping in their drinking watershed. Prime Minister Justin Trudeau laid out his plan to reset Canada's relationship with its indigenous people during his address to a group of First Nations leaders in Gatineau, Que. "It is time for a renewed, nation-to-nation relationship with First Nations peoples, one that understands that the constitutionally guaranteed rights of First Nations in Canada are not an inconvenience but rather a sacred obligation," said Trudeau to loud applause from First Nations chiefs this morning. Tens of thousands of protesters in South Korea have held a mass rally against a raft of government policies that they say weaken democracy. The protest

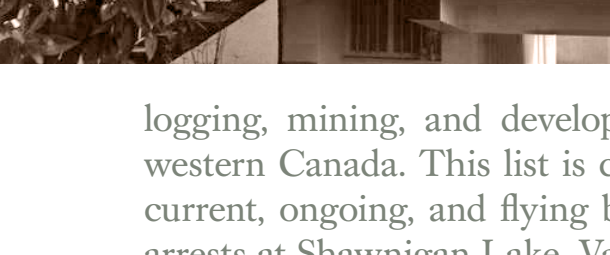

was big, rowdy and attended by a wide cross section of people but there was no repeat of violence which marred a similar rally last month. About 18,000 police were deployed in the capital, Seoul. Protesters oppose plans to transfer texts to labour force and greater controls over history textbooks. The Filipino people are under attack. The Lumad, for example - an indigenous group in the southern Philippines - are being forced to leave their ancestral lands and the source of their livelihood to make way for mining operations and land conversion. Resistance is deadly. In the month of August alone, there were two massacres that left nine dead. On August 30, the army and paramilitary forces occupied the Alternative Learning Center for Agriculture and Livelihood De-

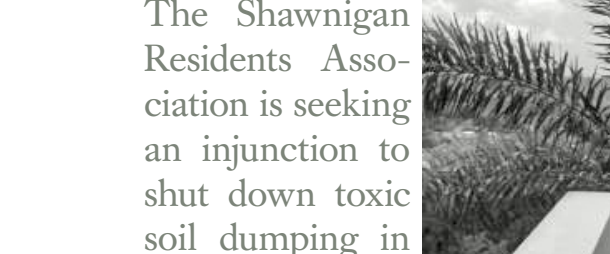

velopment, an award winning school for indigenous youth. North Korean leader Kim Jong Un said Thursday that his country has developed a hydrogen bomb. Kim reportedly said his grandfather turned [North Korea] into a powerful nuclear weapons state ready to detonate a self-reliant [atomic] bomb and [hydrogen] bomb to reliably defend its sovereignty and the dignity of the nation, during a tour of the Phyongchon Revolutionary Site. The hydrogen bomb has a stronger blast than the atomic bomb, but experts are skeptical of North Korea's claims. A man in Iraq landed a \$6.4 million Mega-bucks jackpot in Oregon after he purchased a ticket through an online service, The Oregonian reported Wednesday. The Iraqi Kurd, whose name is not being released, lives in Baghdad and bought the ticket through the website theLotter.com, which charges a fee to send people to buy lottery tickets for customers. The ticket was reportedly purchased in Bend, Oregon, on Aug. 24, and the man traveled to the lottery headquarters in Salem on Dec. 1 to claim the prize. The so-called Classical Age, of the XVII Century modern Philosophy discussed important topics related to the notion of the virtual in connection to the explanation of the representational knowledge of the empirical reality. Memory and Imagination were accessed as functional faculties in the association of impressions and ideas (Hobbes, Locke, and Hume), but due to the importance of the representational content of the consciousness occurred a reduction of the stream of consciousness to the linguistic contents of knowledge according to the indicative phrase. As a consequence, the virtual became a realm of shadows. Explorations and descriptions of such field inspired the

modern literature, and Psychoanalysis is an heir of the interest provoked by this still unfamiliar other side of the mind. The virtuality of memory was subsequently associated with the unconscious but also with the meaning of latency in Charcot, Janet and Freud's ideas about the psychic systems of their patients and through their therapeutic techniques. The Ethiopian government has warned that about 10.2 million people - a tenth of the population - will need emergency food aid by January because of the worst drought experienced by the country in decades. 95 percent of electricity in Uruguay comes from renewable sources. After implementing a new energy strategy in 2008, Uruguay officially generates 95 percent of the country's electricity from renewable sources - including wind turbines, hydropower, solar power, and biomass. A mass grave containing at least 12 fresh corpses has been discovered in north-east Kenya's Mandera County, raising new accusations of extrajudicial killings being carried out by the country's security forces against ethnic Somalis. Gray wolves are mounting a comeback in several northern states and are causing tension about their future. Gray wolves are making a big enough population comeback that some researchers are calling for them to be taken off the federal Endangered Species List. But some tribal nations oppose the measure. The most feared bomber plane of the 20th Century is still going strong after 60 years in service in the US military - from Vietnam to Afghanistan. And it will keep on flying until 2044. How does this 1950s behemoth survive in the era of drones and stealth aircraft? Thank everyone who came to my son and I assistance after a traumatic accident where I tried to slow down for a deer and my brakes caught, a flaw in the truck that was never that bad, and we spun around and hit a hydro pole. It happened so fast and we hit so hard that it is a miracle we walked out of it with nothing more than some sore muscles. The following couple of days have shown a little more soreness in the neck but nothing to stress about. The MASTER OF DESIGN (MDes) is an interdisciplinary, one-year, 42-credit program that prepares students for leading and defining positions in forward-looking careers in developing and expanding design domains. Over the course of three consecutive semesters, beginning in May of every year, students pursue practice-led design research, explorations of process, applications of theory, and scholarly writing. In a series of studio and theory courses, and in their thesis projects, students are encouraged to look beyond conventional strategies to formulate new and critical responses to social design opportunities. Given the interdisciplinary nature of the Program, the MDes welcomes students with diverse academic and cultural backgrounds. By working in a multidisciplinary studio environment, and in multidisciplinary teams, students gain experience in thinking and working with others who bring an international point of view to design and its globally-extended opportunities for creative endeavours outside traditional design areas. Species Summary: Pink-footed Goose (5 Connecticut) Tufted Duck (3 California, 1 Newfoundland and Labrador) Masked Booby (2 Florida) Brown Booby (3 California, 1 Florida) Northern Jacana (1 Texas) Kelp Gull (11 Ohio) Kelp Gull (dominicanus) (1 Ohio) Ruddy Ground-Dove (1 Arizona) Black-capped

was big, rowdy and attended by a wide cross section of people but there was no repeat of violence which marred a similar rally last month. About 18,000 police were deployed in the capital, Seoul. Protesters oppose plans to transfer texts to labour force and greater controls over history textbooks. The Filipino people are under attack. The Lumad, for example - an indigenous group in the southern Philippines - are being forced to leave their ancestral lands and the source of their livelihood to make way for mining operations and land conversion. Resistance is deadly. In the month of August alone, there were two massacres that left nine dead. On August 30, the army and paramilitary forces occupied the Alternative Learning Center for Agriculture and Livelihood De-

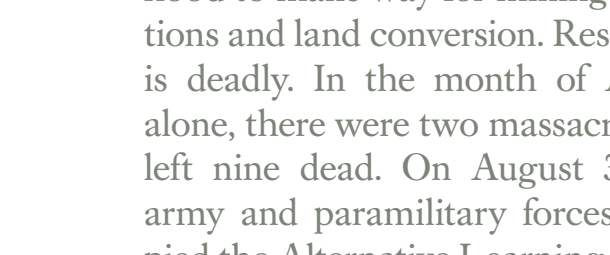

velopment, an award winning school for indigenous youth. North Korean leader Kim Jong Un said Thursday that his country has developed a hydrogen bomb. Kim reportedly said his grandfather turned [North Korea] into a powerful nuclear weapons state ready to detonate a self-reliant [atomic] bomb and [hydrogen] bomb to reliably defend its sovereignty and the dignity of the nation, during a tour of the Phyongchon Revolutionary Site. The hydrogen bomb has a stronger blast than the atomic bomb, but experts are skeptical of North Korea's claims. A man in Iraq landed a \$6.4 million Mega-bucks jackpot in Oregon after he purchased a ticket through an online service, The Oregonian reported Wednesday. The Iraqi Kurd, whose name is not being released, lives in Baghdad and bought the ticket through the website theLotter.com, which charges a fee to send people to buy lottery tickets for customers. The ticket was reportedly purchased in Bend, Oregon, on Aug. 24, and the man traveled to the lottery headquarters in Salem on Dec. 1 to claim the prize. Above all, we gratefully acknowledge and thank the contributing artists,
